

Pediatric Case Study #1

Burns, C.E., Richardson, B. & Brady, M.A. (2010). Pediatric Primary Care Case Studies. Sudbury, Massachusetts: Jones and Bartlett.

Maya Conteh is a 9 month old who comes to the clinic for an evaluation. She is accompanied by her mother who speaks Arabic and English. The mother expresses concern with Maya's development. The family emigrated from the Sudan 1 year ago and now lives in low income student housing because the father is in graduate school. This is their first child. The maternal grandparents are also temporarily living in the house and help with Maya.

Birth History: Maya was born 11 weeks early, weighing 2 lbs 8 oz. When Maya was just a few days old, she stopped breathing and was placed on a ventilator. After 24 hours she was able to breathe on her own. According to the mother, many tests were run on Maya, but the doctors could find nothing wrong. Maya spent 2 months in the hospital without incident and was discharged to home.

Mother reports: she noticed that Maya drooled a lot and choked easily with her bottle. Now she reports that Maya cannot hold her head up straight, roll or sit without support. She cries a lot and becomes stiff with rage. Mother reports no hospitalizations, surgeries or injuries since discharge.

Is Maya developing "normally?"

- No. Maya cannot hold her head up straight, roll or sit without support.

What developmental milestones would you expect a 9-month-old infant to have achieved?

- Lift head by 2 mo.
- Roll over by 4 mo.
- Roll prone to supine by 4 mo.
- Roll supine to prone by 6 mo.
- Sit independently by 8 mo.
- Crawling by 8 mo.
