Claim:
There are different aquatic systems with diverse organisms.

Evidence	Reasoning/Justification
Aquatic ecosystems have abiotic - temp, light, salinity, depth	Different organisms can tolerate different factors
Some organisms prefer fresh water vs. saltwater. Bull sharks + manatees tolerate both	Bull sharks and manatees are very different, but tolerate same conditions
Depth reduces light and increases pressure. Organisms deal with this differently.	Many types of adaptations exist to survive in these conditions
The geography of an aquatic environment can determine the life forms present.	Continental shelf gets lots of light, so there's many living things. Not so in the abyss.
Photosynthesis takes place in the neritic zone.	It is the most productive area of the ocean. Plankton are base of food chain.
Metabolism is affected by temp. Many species are cold-blooded.	Organisms can migrate or must have adaptations to survive.

How To Take Good Notes

Angelos Georgakakis, 2017-06-25

Why would I need a book on how to take notes Notes are just notes FALSE Scientists have found that note taking can be as mentally demanding as playing chess can be for an expert While you take notes you listen carefully to the lecturer you process the new material you organize it in your working memory and you finally write down what you think is most important All this happens while someone is talking at an average speed of three words per second and someone is writing down at an average speed of one third of a word per second It doesn't sound easy now does it Notes are an important tool for learning We don't take notes just to record a few facts so we can review them later Learning happens as we take notes Taking notes the right way leads to good study practices better performance on exams and long term retention of information Note taking comes naturally FALSE Note taking is not obvious or intuitive Research has shown that students fail to capture 40% of the main points in a typical lecture First year students capture only 11% In some studies even the best note takers seem to record less than 75% of the important information People think they take good notes until they're told they don't Few of us have consciously thought about how we take notes let alone how to improve the quality of them We often reproduce the lecturer's phrases verbatim We don't save time by systematic use of abbreviations We fail to become a good psychologist of our lecturer We fail to pick up his enthusiasm We fail to interpret the tone of his voice We fail to read his body language And the result is that we fail to take good notes Anyway no one taught me how to take notes in school or in college TRUE Educators believe that students are able to assess the quality of their notes and follow good practices However studies have shown the exact opposite The fact that there isn't a course in college dedicated to the art of taking notes or learning in general makes students believe that this is a natural skill that they can perfect with practice over the course of their studies At the end of the day everyone has their own way to take notes TRUE In this book you may be surprised to learn that I don't make any references to different types of note taking systems like those that other books do The reason is that it's the practices behind the note taking that matter most For example you should not copy the lecturer's phrases word for word but generate the main points in your own words And you should leave space on your notes for adding comments and testing yourself later I encourage students to use the Cornell note taking system because it utilizes most of the principles of effective note taking No matter which note taking system you decide to follow the cognitive effort you will have to expend is equally high Note taking may not be rocket science but it's definitely science cognitive science And cognitive science has produced a lot of useful insights that we can use now to take better notes This book presents these insights in simple words so you can make the most of your notes and use them to study effectively The title of this book is How to take good notes However note taking is just one part of the picture Note taking is much broader in the context of this book We take notes so we can interact with them later What matters most is what we do with our notes after we finish taking

them Notes can do so many good things for you They hold all your learning efforts Treat them well Look after them
