Gentex Single-Station Smoke Detectors 710/713CS/LS and 7109/7139CS/LS

Section: Conventional Initiating Devices

GENERAL

Gentex 710/713 and 7109/7139 Series phototelectric single-station smoke detectors are designed to give reliable early warning of the presence of smoke where both audible and visual alarms are required. The series features a 90 dB solid-state **piezo signal** and a **177 candela strobe** with "FIRE" lettering. The strobe is Listed per UL 1971.

713/7139 models provide **temporal 3 evacuation tone** as a standard feature. When testing 713/7139 models, it may take up to 16 seconds longer to go into or out of alarm.

The smoke detectors operate on the **light scattering** principle, a superior method of detection utilizing a pulsing LED light source and a photodiode sensor in a fully screened sensing chamber.

Every four to five seconds, the **pulsing LED** emits an **infrared beam** that bypasses the photodiode under normal conditions. When smoke enters the sensing chamber, however, the infrared beam is deflected onto the sensor by the smoke particles. The LED pulse rate increases to eight times the normal rate, and after the photodiode confirms that smoke is present for two consecutive pulses, it will produce the signal necessary to trip an alarm.

Upon activation, the detector will emit a 90 dB local audible signal and activate the high-intensity strobe. During the alarm period, the strobe will flash at a brightness of 177 candela 60 times per minute. After the smoke has cleared from the detector, the unit will revert to the normal standby condition.
