*Designing with Speech Processing Chips* Ricardo Jimenez, 2012-12-02 Designing with Speech Processing Chips focuses on the role that speech processing chips play in data processing control systems and inventory display. The book highlights the use of these chips in electronic circuit design. Divided into seven chapters, the book identifies different kinds of chips including Serial Speech ROM SPR128A, SPR000 Parallel to Serial Speech Interface Chip and Samsung Voice Synthesizers. Experiments on several speech processors are conducted. Electronic diagrams are also presented to show how these chips function. The text puts emphasis on analog and digital circuits. Concerns include the use of a window comparator or a 10 step voltage comparator to drive a speech processor, how to design alternating current motor speed controller with artificial voice, and how to create a talking coffee machine controller. The book goes further by discussing the design of burglar alarms and voice recognition chips. The text is a vital source of data for system engineers, engineering students, technicians and readers interested in the study of speech processing chips.

## **Modern Developments in Vacuum Electron Sources**

Georg Gaertner, Wolfram Knapp, Richard G. Forbes, 2020-10-09 This book gives an overview of modern cathodes and electron emitters for vacuum tubes and vacuum electron devices in general. It covers the latest developments in field emission theory as well as new methods towards improving thermionic and cold cathodes. It addresses thermionic cathodes such as oxide cathodes, impregnated and scandate cathodes as well as photocathodes and field emitters, the latter comprising carbon nanotubes, graphene and Spindt type emitter arrays. Despite the rise and fall of the once dominant types of vacuum tubes such as radio valves and cathode ray tubes, cathodes are continually being improved upon as new applications with increased demands arise for example in electron beam lithography, high power and high frequency microwave tubes, terahertz imaging and electron sources for accelerators. Written by 17 experts in the field, the book presents the latest developments in cathodes needed for these applications, discussing the state of the art and addressing future trends.
