a. The ultimate source of variation. Individual mutations occur so rarely that mutation alone usually does not change allele frequency much.	b. A very potent agent of change. Individuals or gametes move from one population to another.	c. Inbreeding is the most common form. It does not alter allele frequency but changes the proportion of heterozygotes.	d. Statistical accidents. The random fluctuation in allele frequencies increases as population size decreases.	e. The only agent that produces adaptive evolutionary changes.
