Laurent Series Rings and Related Rings Askar Tuganbaev, 2020-09-21 In this book ring theoretical properties of skew Laurent series rings $A[x]$ over a ring A where A is an associative ring with non zero identity element are described In addition we consider Laurent rings and Malcev Neumann rings which are proper extensions of skew Laurent series rings

Configurable Intelligent Optimization Algorithm Fei Tao, Lin Zhang, Yuanjun Laili, 2014-08-18 Presenting the concept and design and implementation of configurable intelligent optimization algorithms in manufacturing systems this book provides a new configuration method to optimize manufacturing processes It provides a comprehensive elaboration of basic intelligent optimization algorithms and demonstrates how their improvement hybridization and parallelization can be applied to manufacturing Furthermore various applications of these intelligent optimization algorithms are exemplified in detail chapter by chapter The intelligent optimization algorithm is not just a single algorithm instead it is a general advanced optimization mechanism which is highly scalable with robustness and randomness Therefore this book demonstrates the flexibility of these algorithms as well as their robustness and reusability in order to solve mass complicated problems in manufacturing Since the genetic algorithm was presented decades ago a large number of intelligent optimization algorithms and their improvements have been developed However little work has been done to extend their applications and verify their competence in solving complicated problems in manufacturing This book will provide an invaluable resource to students researchers consultants and industry professionals interested in engineering optimization It will also be particularly useful to three groups of readers algorithm beginners optimization engineers and senior algorithm designers It offers a detailed description of intelligent optimization algorithms to algorithm beginners recommends new configurable design methods for optimization engineers and provides future trends and challenges of the new configuration mechanism to senior algorithm designers

A Basic Theory of Everything Atle Ottesen Søvik, 2022-04-04 What are the basic building blocks of the world This book presents a naturalistic theory saying that the universe and everything in it can be reduced to three fundamental entities a field a set of values that can be actualized at different places in the field and an actualizer of the values The theory is defended by using it to answer the main questions in metaphysics

such as What is causality existence laws of nature consciousness thinking free will time mathematical entities ethical values etc The theory is compared with the main alternatives and argued to solve problems better than the existing theories Several new theories are suggested such as how to understand mental causation free will and the truth of ethics and mathematics

Neuropsychopharmacology of Psychosis: Relation of Brain Signals, Cognition and Chemistry André Schmidt, Stefan Borgwardt, 2015-04-22 Nothing provided **Semantics and Morphosyntactic Variation** Itamar Francez, Andrew Koontz-Garboden, 2017 This is an open access title available under the terms of a CC BY NC ND 4.0 International licence It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations This book explores a key issue in linguistic theory the systematic variation in form between semantic equivalents across languages Two contrasting views of the role of lexical meaning in the analysis of such variation can be found in the literature i uniformity whereby lexical meaning is universal and variation arises from idiosyncratic differences in the inventory and phonological shape of language particular functional material and ii transparency whereby systematic variation in form arises from systematic variation in the meaning of basic lexical items In this volume Itamar Francez and Andrew Koontz-Garboden contrast these views as applied to the empirical domain of property concept sentences sentences expressing adjectival predication and their translational equivalents across languages They demonstrate that property concept sentences vary systematically between possessive and predicative form and propose a transparentist analysis of this variation that links it to the lexical denotations of basic property concept lexemes At the heart of the analysis are qualities mass like model theoretic objects that closely resemble scales The authors contrast their transparentist analysis with uniformitarian alternatives demonstrating its theoretical and empirical advantages They then show that the proposed theory of qualities can account for interesting and novel observations in two central domains of grammatical theory the theory of syntactic categories and the theory of mass nouns The overall results highlight the importance of the lexicon as a locus of generalizations about the limits of crosslinguistic variation
