This book focuses on the role of technology in global finance and reflects on the ethical and societal meaning and impact of financial information and communication technologies, ICTs. Exploring the history, metaphysics and geography of money, algorithms and electronic currencies, the author argues that financial ICTs contribute to impersonal, disengaged, placeless and objectifying relations, and that in the context of globalization, these distancing effects render it increasingly difficult to exercise and ascribe responsibility. Caught in the currents of capital, it seems that both experts and lay people have lost control and lack sufficient knowledge of what they are doing. There is too much epistemic, social and moral distance. At the same time, the book also shows that these electronically mediated developments do not render global finance merely virtual; for its technological practices remain material and place bound, and the ethical and social vulnerabilities they create are no less real. Moreover, understood in terms of technological practices, global finance remains human, through and through, and there is no technological determinism. Therefore, *Money Machines* also examines the ways in which contemporary techno-financial developments can be resisted or re-oriented in a morally and socially responsible direction, not without but with technology. As such, it will appeal to philosophers and scholars across the humanities and the social sciences, with interests in science and technology, finance, ethics and questions of responsibility. **Currency Stability and a Country's Prosperity** John E. Baiden, 2021-02-10 This book is based upon the author's study and thesis submitted at Thomas Jefferson School of Law. The intent of the study or research was to test or verify the author's hypothesis: thus, unstable currencies equals an unstable country. By understudying currencies in top ten countries and bottom ten countries ranked in the 2016 World Prosperity Index and Fragile States Index 2016 to determine whether there is a co-relationship between stable or unstable currencies and a country's prosperity or failure/misery.
