Joshua, 2017-06-05 Although lunar exploration began in the 1960s the moon and other planets have many long standing unanswered questions about planetary environments origin formation and evolution magnetization of crustal rocks internal structure and possible life However with the recent development of planetary geodesy and remote sensing with higher spatial and spectral resolution have come new opportunities to explore and understand the moon and planets in greater detail Written by well established international scientists in the planetary science and remote sensing fields Planetary Geodesy and Remote Sensing presents the latest methods and techniques of planetary geodesy and remote sensing

Planetary Remote Sensing and Mapping Bo Wu, Kaichang Di, Jürgen Oberst, Irina Karachevtseva, 2018-10-29 The early 21st century marks a new era in space exploration The National Aeronautics and Space Administration NASA of the United States The European Space Agency ESA as well as space agencies of Japan China India and other countries have sent their probes to the Moon Mars and other planets in the solar system Planetary Remote Sensing and Mapping introduces original research and new developments in the areas of planetary remote sensing photogrammetry mapping GIS and planetary science resulting from the recent space exploration missions Topics covered include Reference systems of planetary bodies Planetary exploration missions and sensors Geometric information extraction from planetary remote sensing data Feature information extraction from planetary remote sensing data Planetary remote sensing data fusion Planetary data management and presentation Planetary Remote Sensing and Mapping will serve scientists and professionals working in the planetary remote sensing and mapping areas as well as planetary probe designers engineers and planetary geologists and geophysicists It also provides useful reading material for university teachers and students in the broader areas of remote sensing photogrammetry cartography GIS and geodesy **Planetary Cartography and GIS** Henrik Hargitai, 2019-02-22

This book approaches geological geomorphological and topographical mapping from the point in the workflow at which science ready datasets are available Though there have been many individual projects on dynamic maps and online GISs in which coding and data processing are given precedence over cartographic principles cartography is more than just processing and displaying spatial data However there are currently no textbooks on this rapidly changing field and methods tend to be shared informally Addressing this gap in the literature the respective chapters outline many topics pertaining to cartography and mapping such as the role and definition of planetary cartography and vs Geographic Information Science theoretical background and practical methodologies in geological mapping science ready versus public ready products a goal

procedure focused practical manual of the most commonly used software in planetary mapping which includes generic ArcGIS and its extensions JMARS and specific tools HiView Crater tools etc extracting topographic information from images thematic mapping climate geophysics surface modeling change detection landing site selection shared maps dynamic maps on the web planetary GIS interfaces crowdsourcing crater counting techniques irregular bodies geological unit symbology mapping center activities and web services All chapters were prepared by authors who have actually produced geological maps or GISs for NASA the USGS DLR ESA or MIIGAIK Taken together they offer an excellent resource for all planetary scientists whose research depends on mapping and for students of astrogeology

Radio Science Techniques for Deep Space Exploration Sami W. Asmar, 2022-03-29 Explore the development and state of the art in deep space exploration using radio science techniques In Radio Science Techniques for Deep Space Exploration accomplished NASA JPL researcher and manager Sami Asmar delivers a multi disciplinary exploration of the science technology engineering mission operations and signal processing relevant to deep space radio science The book discusses basic principles before moving on to more advanced topics that include a wide variety of graphical illustrations and useful references to publications by experts in their respective fields Complete explanations of changes in the characteristics of electromagnetic waves and the instrumentation and technology used in scientific experiments are examined Radio Science Techniques for Deep Space Exploration offers answers to the question of how to explore the solar system with radio links and better understand the interior structures atmospheres rings and surfaces of other planets The author also includes Thorough introductions to radio science techniques and systems needed to investigate planetary atmospheres rings and surfaces Comprehensive explorations of planetary gravity and interior structures as well as relativistic and solar studies Practical discussions of instrumentation technologies and future directions in radio science techniques Perfect for students and professors of physics astronomy planetary science

aerospace engineering and communications engineering Radio Science Techniques for Deep Space Exploration will also earn a place in the libraries of engineers and scientists in the aerospace industry Principles of Applied Remote Sensing Siamak Khorram, Cynthia F. van der Wiele, Frank H. Koch, Stacy A. C. Nelson, Matthew D. Potts, 2016-01-04 This textbook is one of the first to explain the fundamentals and applications of remote sensing at both undergraduate and graduate levels Topics include definitions and a brief history of payloads and platforms data acquisition and specifications image processing techniques data integration and spatial modeling and a range of applications covering terrestrial atmospheric oceanographic and planetary disciplines The policy and law issues of remote sensing and the future trends on the horizon are also covered Remote sensing is an exciting dynamic technology that is transforming the Earth sciences terrestrial atmospheric and marine as well as the practices of agriculture disaster response engineering natural resources providing evidence in legal cases and documented humanitarian crises and many other fields Increasingly understanding of these techniques will be central to a number of disciplines particularly as the technology advances *Mercury* Sean C.
