B. Thin lenses are objects that refract light in a way that allows us to focus light and produce clear images.

C. Real-world examples of thin lenses include eyeglasses, microscopes, and cameras.

II. Refraction of Light

A. The degree to which light is refracted depends on the difference in the index of refraction between the two media.

B. Snell's Law describes the relationship between the angle of incidence and the angle of refraction.

C. Different materials have different indexes of refraction, which can be used to create lenses with different optical properties.

III. Types of Lenses

A. Convex lenses: Refract light waves inwards and produce a magnified, upright image.

B. Concave lenses: Refract light waves outwards and produce a smaller, inverted image.
