Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

Two runners ran side by side, each holding one end of a horizontal pole.

1. What would most likely happen if one of the runners began jogging in knee-deep water?

The jogger would slow down because when one of your body parts are under water they are slower the water basically pulls your body down just like the jogger if he was in the water.

2. How would this affect the direction of the runners? Explain. For me whenever I run in the water I really dont move directions it depends on the wave the waves can be moving my body and I dont knotice it.

Gizmo Warm-up

Light can travel through many materials, or **media**. As with a runner on pavement or sand, the speed of light can change when it moves into a different medium. The *Refraction Gizmo™* allows you to observe what happens to a beam of light as it travels from one medium to another.

Turn off **View wave fronts**. Set **Index of refraction 2** to 3.0.

1. Click **Play** (▶). Observe the ray of light as it passes from **Medium 1** to **Medium 2**.
 - A. What happens to the speed of the light wave? The speed of the light slowed down because it had to go to another angle.
 - B. What happens to the direction of the light wave? It changes direction when it hits the line.

The bending of the light ray you see is called **refraction**.

Geology From Experience E. Kirsten Peters, Larry E. Davis, 2000-11-05 Moving away from the observation and vocabulary focus of traditional physical geology lab manuals Peters and Davis's *Geology from Experience* offers experiments that favor hands on involvement and scientific problem solving Students are asked to use geological tools and techniques analyze data from observation experiment and research solve simple equations and make assessments and relevant predictions This approach class tested with great success by the authors gives students a real taste of the scientific experience by revealing the ways geologists actually do their work

Exposed Cross-Sections of the Continental Crust M.H. Salisbury, David M. Fountain, 2012-12-06 In the Fall of 1988 64 geologists and geophysicists from 11 countries met in Killarney Ontario on the north shore of Lake Huron to examine evidence that suggests that the continental crust is exposed in cross section at several key locations on the Earth's surface The meeting which was held under NATO auspices as an Advanced Study Institute was a landmark event in that it was the first time that many of the lead scientists working on these complexes in relative isolation around the world had ever gathered together to compare results The present volume is a compendium of the invited lectures given on the principle sections plus an array of supporting papers on these and other sections as well as on related topics such as crustal emplacement mechanisms deformation and rheology Nearly all of the best known sections are represented including the Ivrea Zone Calabria the Kapuskasing Zone Fiordland and many others It is our hope that this Volume will serve as a reference for Earth scientists who are trying to understand levels of the crust not normally exposed to view as well as a point of departure for new research and a teaching aid to new entrants in this relatively new field of study
