Plastic Ocean: Art and Science Responses to Marine Pollution Ingeborg Reichle, 2021-07-05 Our oceans are in an ecological crisis due to their contamination with millions of tons of toxic microplastic particles In just a few years the volume of microplastic particles will exceed that of plankton in our oceans and turn them into a huge sea of plastic This publication brings together numerous international art projects related to environmental activities DIY biotechnology and science and draws attention to the irreversible destruction of our marine ecosystems the current threat posed by the loss of marine animal biodiversity for example or the decline in oxygen production due to massive plankton loss It also presents current scientific findings on sustainable alternatives to plastic **The Protection of Biodiversity and Traditional Knowledge in International Law of Intellectual Property** Jonathan Curci, 2010 Analyses the methods of protection of biodiversity and related traditional knowledge in the international and comparative national intellectual property systems **Experimenting with the New European Bauhaus Values and Principles in Urban Transformation** Alessandro Deserti, Emma Puerari, 2024-12-27 This open access book offers valuable insights into experimenting with New European Bauhaus values and principles in urban transformation drawing on contributions from key players such as local activists action researchers municipalities developers and artists It highlights lessons learned from the lighthouse project Desire Designing the Irresistible Circular Society weaving a narrative of transformative change The book emphasizes innovative strategies citizen engagement and transdisciplinary approaches in shaping urban environments The journey begins with an in depth exploration of the Desire project providing a nuanced understanding of the broader context of its experiments and research activities This foundation leads to an examination of diverse approaches to achieving sustainable inclusive and aesthetically enriching urban transformations Readers are guided through the complexities of urban change gaining a holistic understanding of how urban transformation and an irresistible circular society can be cultivated and sustained within the dynamic landscape of European cities Additionally the book presents findings from an EU lighthouse project showcasing how urban transformation sites evolve by integrating lessons that could inform future policy research and further advancements within the New European Bauhaus initiative **Central American Biodiversity** Falk Huettmann, 2015-08-04 This book highlights key results and lessons learnt from two field sites La Suerte in Costa Rica and Ometepe Nicaragua It provides long term data on species abundance and distribution Primates receive specific attention in this book as they are flagship species and good indicators for the health of an ecosystem but as well a money maker Many primate species are sensitive to habitat alteration and are often hunted out first But they play an important role as seed dispersal agents for the regeneration of the forest The book then compares results from the two field sites with regional trends and explores potential solutions such as REDD This book strongly calls for new approaches in conservation it makes the case for looking beyond the pure species biology and classic conservation angle and to take into account the economic and political realities **Integrating**

Conservation Biology and Paleobiology to Manage Biodiversity and Ecosystems in a Changing World G. Lynn Wingard, Chris Schneider, Gregory P. Dietl, Damien Fordham, Policy makers and resource managers must make decisions that affect the resilience and sustainability of natural resources including biodiversity and ecosystem services. However, these decisions are often based on evidence or theory derived from highly altered systems and over short time periods of low magnitude environmental and climatic change. Because natural systems change and evolve across multiple timescales from instantaneous to millennial, long-term understanding of how past life has responded to perturbations can inform resource managers. By using these natural laboratories of the past, conservation paleobiology and paleoecology provide the framework necessary to anticipate and plan for future changes. The goal of this Research Topic is to heighten awareness among conservation and restoration practitioners to the value and applications of long-term perspectives provided by conservation paleobiology and paleoecology. Most conservation studies focus on systems already impacted by anthropogenic change; these studies would benefit from paleontological data through expanded temporal scales, identification of baselines, and an understanding of how organisms have responded to past changes. However, resource management decisions rarely include input from paleontologists, and paleoecological research is rarely incorporated into conservation decision making. We seek to bridge this research implementation gap by highlighting the application of paleoecological data to issues such as biodiversity dynamics, extinction risks, and resilience to perturbations among other topics. We hope to foster new cross-disciplinary synergies by encouraging conservation scientists and managers to collaborate with paleontologists to improve conservation decision making and by increasing awareness among paleontologists to the needs of the resource management community. This Research Topic will provide a forum for both the paleontological and resource management communities to exchange ideas that will enhance restoration and conservation decision making. We invite papers on conceptual advances, reviews of specific topics to guide efforts in research or practice, case studies of successful applications, articles describing datasets with applied value and perspective, papers summarizing a body of paleontological research with relevance to the resource management community. Topics can include but are not limited to: Responses of species communities and ecosystems to perturbations; Strategies to achieve the direct integration of paleobiology and paleoecology into on-ground resource management; Identifying baselines and reference conditions; Increasing the robustness of forecasting models through the incorporation of paleontological data; Identifying key species interactions and other phenomena as indicators of impending change; New methodologies, analytical tools, and/or proxies in the application of paleontological data to conservation and restoration practice. Lynn Wingard, Damien Fordham, and Greg Dietl have no conflicts of interest. Chris Schneider has a potential conflict of interest where manuscripts pertain to stakeholders in the petroleum industry as she is an independent contractor in the Alberta Oil Sands mining area.

Phylogenetic Relationships of Oryzomine Rodents (Muroidea, Sigmodontinae) Marcelo Weksler, 2006. In this study, I provide a phylogenetic hypothesis for the tribe Oryzomyini that can

be used to understand the diversification and evolution of this group of rodents and to revise the current generic level classification Morphological and molecular data were used for these purposes in combined and separate analyses Molecular data consisted of partial sequences 1266 bp from the first exon of the nuclear gene encoding the interphotoreceptor retinoid binding protein IRBP the morphological matrix comprised 99 characters including 16 integumental characters 32 skull characters 29 dental characters 7 postcranial characters and 10 characters from the phallus and soft anatomy systems I present anatomical descriptions for each character including delineation of different states observed among oryzomyines Results of the combined analysis were congruent with the IRBP only dataset for oryzomyine higher level relationships Morphological analyses although showing discrepancies from the combined or IRBP consensus cladograms and with low nodal support values recovered several clades similar to the combined and IRBP analyses Systematics of the tribe and the evolution of a few pivotal characters are discussed in light of the proposed phylogeny Different taxonomic arrangements for species currently included in the genus *Oryzomys* are suggested Finally I evaluate evolutionary and biogeographic hypotheses that are compatible with our current knowledge on oryzomyine relationships

Reptile Biodiversity Roy W. McDiarmid, 2012-01-10 Authoritative and comprehensive provides an up to date description of the tool box of methods for inventorying and monitoring the diverse spectrum of reptiles All biodiversity scientists will want to have it during project planning and as study progresses A must for field biologists conservation planners and biodiversity managers Jay M Savage San Diego State University Kudos to the editors and contributors to this book From the perspective of a non ecologist such as myself who only occasionally needs to intensively sample a particular site or habitat the quality and clarity of this book has been well worth the wait Jack W Sites Jr **Birdscapes** ,2001 The Soil Underfoot G. Jock Churchman, Edward R. Landa, 2014-04-21 The largest part of the world s food comes from its soils either directly from plants or via animals fed on pastures and crops Thus it is necessary to maintain and if possible improve the quality and hence good health of soils while enabling them to support the growing world population The Soil Underfoot Infinite Possibilities for a Finite Lactic Acid Bacteria Wilhelm H. Holzapfel, Brian J.B. Wood, 2014-04-29 Lactic Acid Bacteria Biodiversity and Taxonomy Lactic Acid Bacteria Biodiversity and Taxonomy Edited by Wilhelm H Holzapfel and Brian J B Wood The lactic acid bacteria LAB are a group of related microorganisms that are enormously important in the food and beverage industries Generally regarded as safe for human consumption and in the case of probiotics positively beneficial to human health the LAB have been used for centuries and continue to be used worldwide on an industrial scale in food fermentation processes including yoghurt cheeses fermented meats and vegetables where they ferment carbohydrates in the foods producing lactic acid and creating an environment unsuitable for the survival of food spoilage organisms and pathogens The shelf life of the product is thereby extended but of course these foods are also enjoyed around the world for their organoleptic qualities They are also important to the brewing and winemaking industries where they are often undesirable intruders but can in specific cases have desirable

benefits The LAB are also used in producing silage and other agricultural animal feeds Clinically they can improve the digestive health of young animals and also have human medical applications This book provides a much needed and comprehensive account of the current knowledge of the LAB covering the taxonomy and relevant biochemistry physiology and molecular biology of these scientifically and commercially important microorganisms It is directed to bringing together the current understanding concerning the organisms remarkable diversity within a seemingly rather constrained compass The genera now identified as proper members of the LAB are treated in dedicated chapters and the species properly recognized as members of each genus are listed with detailed descriptions of their principal characteristics Each genus and species is described using a standardized format and the relative importance of each species in food agricultural and medical applications is assessed In addition certain other bacterial groups such as Bifidobacterium often associated with the LAB are given in depth coverage The book will also contribute to a better understanding and appreciation of the role of LA B in the various ecosystems and ecological niches that they occupy In summary this volume gathers together information designed to enable the organisms fullest industrial nutritional and medical applications Lactic Acid Bacteria Biodiversity and Taxonomy is an essential reference for research scientists biochemists and microbiologists working in the food and fermentation industries and in research institutions Advanced students of food science and technology will also find it an indispensable guide to the subject Also available from Wiley Blackwell The Chemistry of Food Jan Velisek ISBN 978 1 118 38384 1 Progress in Food Preservation Edited by Rajeev Bhat Abd Karim Alias and Gopinadham Paliyath ISBN 978 0 470 65585 6 **Biology** Eric Strauss, Marylin Lisowski, 2000 **Subglacial Lakes** Sierra Layne, AI, 2025-03-20 Subglacial Lakes explores the hidden world beneath the Antarctic ice sheet revealing vast aquatic ecosystems that offer unique insights into Earth sciences biology and even astrobiology These lakes shrouded in perpetual darkness harbor microbial life that has evolved in isolation for millions of years providing valuable clues about the limits of life and its adaptability in extreme environments The book emphasizes how studying these systems is crucial given their influence on ice sheet stability which directly impacts predictions of future sea level rise The book reveals how the study of subglacial lakes uses geophysical techniques like radar sounding and seismic surveys It progresses through the geological context of lake formation to the biogeochemical properties discovered through direct sampling such as at Lake Vostok and Lake Whillans By integrating geological geophysical and biological perspectives Subglacial Lakes presents a holistic view of these interconnected systems highlighting their relevance to climate change and the potential for life on icy moons **Omics and Systems Approaches to Study the Biology and Applications of Lactic Acid Bacteria** Konstantinos Papadimitriou, Jan Kok, Pierre Renault, Kimberly Kline, 2020-10-13 The economic importance of lactic acid bacteria LAB for the food industry and their implication in health and disease has rendered them attractive models for research in many laboratories around the world Over the past three decades molecular and genetic analysis of LAB species provided important insights into the biology and application of starter and probiotic LAB

and in the virulence of LAB pathogens The knowledge obtained prepared LAB researchers for the forthcoming opportunities provided by the advent of microbial genomics Today developments in next generation sequencing technologies have rocketed LAB genome research and the sequences of several hundreds of strains are available This flood of information has revolutionized our view of LAB First of all a detailed picture has emerged about the evolutionary mechanisms allowing LAB to inhabit the very diverse ecological niches in which they can be found Adaptation of LAB to nutrient rich environments has led to degenerative evolution processes that resulted in shortening of chromosomes and simplified metabolic potential Gene acquisition through horizontal transfer on the other hand is also important in shaping LAB gene pools Horizontally acquired genes have been shown to be essential in technological properties of starters and in probiosis or virulence of commensals Progress in bioinformatics tools has allowed rapid annotation of LAB genomes and the direct assignment of genetic traits among species strains through comparative genomics In this way the molecular basis of many important traits of LAB has been elucidated including aspects of sugar fermentation flavor and odor formation production of textural substances stress responses colonization of and survival in the host cell to cell interactions and pathogenicity Functional genomics and proteomics have been employed in a number of instances to support in silico predictions Given that the costs of advanced next generation methodologies like RNA seq are dropping fast bottlenecks in the in silico characterization of LAB genomes will be rapidly overcome Another crucial advancement in LAB research is the application of systems biology approaches by which the properties and interactions of components or parts of a biological system are investigated to accurately understand or predict LAB behavior Practically systems biology involves the mathematical modeling of complex biological systems that can be refined iteratively with wet lab experiments High throughput experimentation generating huge amounts of data on the properties and quantities of many components such as transcripts enzymes and metabolites has resulted in several systems models of LAB Novel techniques allow modelling of additional levels of complexity including the function of small RNAs structural features of RNA molecules and post translational modifications In addition researchers have started to apply systems approaches in the framework of LAB multispecies ecosystems in which each species or strain is considered as a part of the system Metatranscriptomics metaproteomics and metametabolomics offer the means to combine cellular behavior with population dynamics in microbial consortia
