

Laboratory Activity #1 — Student Laboratory Packet

Relationships and Biodiversity*A Laboratory Activity for the Living Environment***Introduction**

Botana curus is a valuable plant because it produces Curol, a compound used for treating certain kinds of cancer. Curol cannot be produced in the laboratory. *Botana curus* grows very slowly and is on the endangered species list, so its ability to provide Curol in large quantities is limited.

Species that are more closely related to *Botana curus* are more likely to produce the important substance Curol. Three similar plant species that are plentiful (X, Y, and Z) may be related to *Botana curus*. You will work as a researcher to:

- gather structural and molecular evidence to determine which plant species is most closely related to the hypothetical species, *Botana curus*
- use this evidence to decide which plant species is most likely to serve as a source of the important substance Curol

Safety

- You will need to wear goggles while conducting Tests 4 and 5.
- Do not eat or drink anything in the laboratory while doing this laboratory activity.

Important Note: Record all of your data and answers on these laboratory sheets. You will need to keep them for review before the Regents Examination. Later, you will need to transfer your answers to a separate Student Answer Packet. Your teacher will use the packet in grading your work, and the school will retain it as evidence of your completion of the laboratory requirement for the Living Environment Regents Examination.

Structural Evidence for Relationships

Perform the following tests and record your observations in Table 1 on page 8 of this packet. Use a hand lens or microscope as needed.

Test 1—Structural Characteristics of Plants

- Do not remove the plant samples from the plastic bags/cards.
- Compare the structural characteristics of the plant samples. Record your observations in Table 1 (see page 8).

Test 2—Structural Characteristics of Seeds

- Do not remove the seed samples from the plastic bags/cards.
- Compare the structural characteristics of the seed samples. Record your observations in Table 1.

Foster, Gerald F. Bills, 2011-04-28 Biodiversity of Fungi is essential for anyone collecting and or monitoring any fungi

Fascinating and beautiful fungi are vital components of nearly all ecosystems and impact human health and our economy in a myriad of ways. Standardized methods for documenting diversity and distribution have been lacking. A wealth of information, especially regarding sampling protocols compiled by an international team of fungal biologists, makes *Biodiversity of Fungi* an incredible and fundamental resource for the study of organismal biodiversity. Chapters cover everything from what is a fungus to maintaining and organizing a permanent study collection with associated databases from protocols for sampling slime molds to insect associated fungi from fungi growing on and in animals and plants to mushrooms and truffles. The chapters are arranged both ecologically and by sampling method rather than by taxonomic group for ease of use. The information presented here is intended for everyone interested in fungi: anyone who needs tools to study them in nature including naturalists, land managers, ecologists, mycologists, and even citizen scientists and sophisticated amateurs. Covers all groups of fungi from molds to mushrooms, even slime molds. Describes sampling protocols for many groups of fungi. Arranged by sampling method and ecology to coincide with users' needs. Beautifully illustrated to document the range of fungi treated and techniques discussed. Natural history data are provided for each group of fungi to enable users to modify suggested protocols to meet their needs.

A Manual of Practical Laboratory and Field Techniques in Palaeobiology O.R. Green, 2013-03-09 The user This manual is designed for the use of geo scientists with an interest and need in developing palaeobiological materials as a potential source of data. To meet this objective practical procedures have been formatted for use by both professional and semi professional students with an initial understanding of palaeo biological research aims as a primary source of scientific data. I have attempted to provide an explanation and understanding of practical procedures which may be required by students undertaking palaeobiological projects as part of a degree course. The layout of this manual should be particularly beneficial in the instruction and training of geotechnologists and museum preparators. Graduate students and scientists requiring an outline of a preparation procedure will also be able to use the manual as a reference from which to assess the suitability of a procedure. This manual is also intended for use by the committed amateur. Many of the techniques described in this manual have been devised by non palaeontologists and developed from methods used in archaeology, zoology and botany as well as other areas of geology. A considerable number of the methods can be undertaken by the amateur and in the case of many of the field procedures should be used. This will ensure that specimens and samples can be conserved in such a manner as to facilitate any later research and not invalidate the results of subsequent geochemical analytical techniques which might be employed.
