

Relationships and Biodiversity

A laboratory activity for the Living Environment

Introduction

Potamogeton is a valuable plant because it produces Curc, a compound used for treating certain kinds of cancer. Curc cannot be produced in the laboratory. *Potamogeton* grows very slowly and is on the endangered species list, so its ability to provide Curc in large quantities is limited.

Species that are more closely related to *Potamogeton* are more likely to produce the important substance Curc because their DNA is similar. If you remember, DNA codes the directions for making proteins and curc is a protein. Three similar plant species that are plentiful (X, Y, and Z) may be related to *Potamogeton*. You will work as a researcher to:

- gather structural and molecular evidence to determine which plant species is most closely related to the hypothetical species (think it is not real) *Potamogeton*
- use this evidence to decide which plant species is most likely to serve as a source of important substance Curc

How are we going to figure out which plant is most closely related?

We will use some different tests to complete the task.

- Three different forms of structural evidence.
- An enzyme catalyzed reaction test.
- DNA gel electrophoresis.
- Paper chromatography.
- Molecular evidence.
