Exploring Physical Anthropology Laboratory Manual & Workbook Suzanne E. Walker-Pacheco, 2017-02-01

Exploring Physical Anthropology is a comprehensive full color lab manual intended for an introductory laboratory course in physical anthropology. It can also serve as a supplementary workbook for a lecture class, particularly in the absence of a laboratory offering. This laboratory manual enables a hands-on approach to learning about the evolutionary processes that resulted in humans through the use of numerous examples and exercises. It offers a solid grounding in the main areas of an introductory physical anthropology lab course: genetics, evolutionary forces, human osteology, forensic anthropology, comparative functional skeletal anatomy, primate behavior, paleoanthropology, and modern human biological variation.

Sorcerers of Stone Camille M. Sauv , 2024-05-21 Explains the three distinct architectural styles found at the majority of sacred sites representing three ancient world ages. Examines evidence of the two oldest architectural ages at sites in the Sacred Valley of Peru in depth, connecting them to other sites around the world. Explores the sophisticated science behind the construction of these stone sites, including modern research on acoustic levitation and ancient use of geopolymers. All around the world are mysterious ancient monoliths with strange features: perfectly carved terraces, massive steps, basins, and abstract forms with underground grottos and cave systems. Most archaeologists have a hard time explaining them and attribute their construction to the earliest known cultures in the area. Examining sacred sites in Peru and their counterparts around the world, researcher and journalist Camille M. Sauv  shows how these sites share specific architectural characteristics and reveal evidence of a very ancient culture that once existed worldwide. She examines the work of Peruvian researcher Alfredo Gamarra, who first described in detail the three distinct building styles and construction methods of these sites and how they represent three ancient world ages. She explains how Hanan Pacha, heaven above, constructions the oldest style are universally revered as sacred by the civilizations that came after them. Weaving together a tapestry of what early humanity looked like, Sauv  examines the writings of famous clairvoyants like Rudolf Steiner, Madame Blavatsky, and Edgar Cayce, who recorded the works of early man through the Akashic records. Besides the more esoteric questions about who could have built these wonders, Sauv  also examines the unique properties of the monoliths themselves and the sophisticated science behind the construction of these stone sites. She shows how they seem to be placed on earth power spots and how most of the rocks have significant piezoelectric properties from high quartz and silica content. Revealing that many sacred sites are much older than previously thought, Camille Sauv  shows that Peru may hold the secret to remembering our forgotten prehistory.
