Essay Example on Observational Topics

Experimental research, besides known as field research, pertains to a research attack that engages in the direct recording of a phenomenon as it occurs in its natural status (Zechmeister et al. , 2003) . This research attack is distinguishable from the other research methods because it employs a quasi-artificial scenario that is comprised of a figure of factors, of which some could be controlled. The capacity to command at least one of the factors in the environment allows the research worker to execute the scientific method that would reply the developed hypothesis.

Essay Example on Observational Topics

Observational research could be performed utilizing any of the three classified types of experimental techniques. The covert type of experimental research involves unidentified research workers that straight interact with the survey participants and remain undetected until the completion of the probe. In other instances, the research workers are positioned at a distance from the survey participants, yet are still capable of direct observation of the actions and interactions that each of the survey participants engages in.

One advantage of this type of experimental research attack is that the survey participants are non required to collaborate with the research worker. The namelessness of the research worker in the scenario provides survey participants to freely show themselves and to liberally do determinations without being influenced by the research worker. Unfortunately, it is besides possible that certain ethical misdemeanors could be related to this type of experimental attack, chiefly as a signifier of misrepresentation that is associated with the researchers' namelessness.

The open type of experimental research allows the research workers to place themselves to the survey participants. In add-on, the research workers are besides required to to the full unwrap the intent of their probe to the survey participants. One disadvantage that is strongly associated with the open type of experimental research is the impact of the revelation on the behaviour of the survey participants during the full experimental period. It is really natural for an person to be alert of their actions when they are cognizant that at least one person is detecting their behaviour.

As such, the survey participant exerts attempt in projecting the ideal personality that is acceptable to the eyes of the perceiver and decidedly non brooding of the existent personality of the survey participant. However, it should be understood that in this type of experimental research attack, there would be no ethical issues related to misrepresentation of the survey participants because the individuality and the ends of the research worker have been disclosed early on.

Researcher engagement is another experimental type of research attack that engages the research worker in the scenario
