Arctic Ice Shelves and Ice Islands Luke Copland, Derek Mueller, 2017-05-30 This book provides an overview of the current state of knowledge of Arctic ice shelves ice islands and related features Ice shelves are permanent areas of ice which float on the ocean surface while attached to the coast and typically occur in very cold environments where perennial sea ice builds up to great thickness and

or where glaciers flow off the land and are preserved on the ocean surface These landscape features are relatively poorly studied in the Arctic yet they are potentially highly sensitive indicators of climate change because they respond to changes in atmospheric oceanic and glaciological conditions Recent fracturing and breakup events of ice shelves in the Canadian High Arctic have attracted significant scientific and public attention and produced large ice islands which may pose a risk to Arctic shipping and offshore infrastructure Much has been published about Antarctic ice shelves but to date there has not been a dedicated book about Arctic ice shelves or ice islands This book fills that gap

estimates have shown that China has become the world's largest source of greenhouse gas emissions. China's influence on the world's environment and sustainable development highlights the importance of tailoring Chinese climate change law to conform with the requirements of international conventions and agreements on climate change. This thorough analysis based on an examination of climate status, legal background and current regulatory systems in China examines the potential role of different policy instruments in reducing carbon emissions in order to find an appropriate choice for China and recommends approaches to key issues for relevant authorities. The author conducts a comprehensive and in-depth study on the three mainstream environmental policy instruments used to control carbon emissions: the cap and trade system, the carbon tax and command and control regulations in a Chinese context. She reviews China's current policies and elucidates how the issues of climate change and global warming call for social, environmental, economic and legal reforms in China, especially in the areas of administrative law and property rights law. Among the issues and topics covered are the following key issues: on designing and implementing each of the three policy instruments; the choice of regulatory instruments for carbon emissions reduction in a socialist market economy based on the discussion of market failure and government failure theories; legal challenges from China's current administrative legislation and the definition of carbon emissions entitlements; practical effect of China's climate change policy at the national, provincial and local levels; effectiveness of China's implementation of its international obligations; lessons learned from schemes implemented in the United States and Australia; comparison of China's seven regional pilot emissions trading scheme (ETS) programmes with the well-established EU ETS; linkage between China's ETS and other ETSs from a global perspective and future direction of an emerging carbon market in China. The analysis assesses the critical costs and benefits of each approach in the context of selected case studies, taking legal literature in the field fully into account. Given that the Chinese government is taking steps to reduce emissions by altering energy production and usage and is signalling a willingness to make similar commitments in a multilateral treaty, it is very timely and important for lawmakers and scholars within and outside China to think about new and appropriate regulatory measures to respond to the crisis and plan for a sustainable future. This study provides not only a useful benchmark for both China and other countries in formulating initiatives on enhancing climate protection but also details the global implications for governments and for international organizations concerned with the understanding between China and the rest of the world in the context of climate change mitigation.

Unifying Theories of Programming Jonathan P. Bowen, Huibiao Zhu, 2017-01-10. This book constitutes the refereed proceedings of the 6th International Symposium on Unifying Theories of Programming (UTP 2016) held in Reykjavik, Iceland, in June 2016, in conjunction with the 12th International Conference on Integrated Formal Methods (iFM 2016). The 8 revised full papers presented were carefully reviewed and selected from 10 submissions. They deal with the fundamental problem of combination of formal notations and theories of programming that define in various different ways many common notions such as abstraction, refinement, choice, termination, feasibility, locality, concurrency and communication.

They also show that despite many differences such theories may be unified in a way that greatly facilitates their study and comparison
