Heimler, 1989 **Second Microgravity Fluid Physics Conference**, 1994 Review of the Draft 2014 Science Mission Directorate Science Plan Committee on the Assessment of the NASA Science Mission Directorate 2014 Science Plan, Space Studies Board, Division on Engineering and Physical Sciences, National Research Council, 2013-12-16 NASA's Science Mission Directorate SMD is engaged in the final stages of a comprehensive agency wide effort to develop a new strategic plan at a time when its budget is under considerable stress SMD's Science Plan serves to provide more detail on its four traditional science disciplines astronomy and astrophysics solar and space physics also called heliophysics planetary science and Earth remote sensing and related activities than is possible in the agency wide Strategic Plan Review of the Draft 2014 Science Mission Directorate Science Plan comments on the responsiveness of SMD's Science Plan to the National Research Council's guidance on key science issues and opportunities in recent NRC decadal reports This study focuses on attention to interdisciplinary aspects and overall scientific balance identification and exposition of important opportunities for partnerships as well as education and public outreach and integration of technology development with the science program The report provides detailed findings and recommendations relating to the draft Science Plan **Earth Science and Applications from Space** National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Assessment of NASA's Earth Science Program, 2012-09-03 Understanding the effects of natural and human induced changes on the global environment and their implications requires a foundation of integrated observations of land sea air and space on which to build credible information products forecast models and other tools for making informed decisions The 2007 National Research Council report on decadal survey called for a renewal of the national commitment to a program of Earth observations in which attention to securing practical benefits for humankind plays an equal role with the quest to acquire new knowledge about the Earth system NASA responded favorably and aggressively to this survey embracing its overall recommendations for Earth observations missions technology investments and priorities for the underlying science As a result the science and applications communities have made significant progress over the past 5 years However the Committee on Assessment of NASA's Earth Science Program found that the survey vision is being realized at a far slower pace than was recommended principally because the required budget was not achieved Exacerbating the budget shortfalls NASA Earth science programs experienced launch failures and delays and the cost of implementing missions increased substantially as a result of changes in mission scope increases in launch vehicle costs and or the lack of availability of a medium class launch vehicle under estimation of costs by the decadal survey and unfunded programmatic

changes that were required by Congress and the Office of Management and Budget In addition the National Oceanic and Atmospheric Administration NOAA has made significant reductions in scope to its future Earth environmental observing satellites as it contends with budget shortfalls Earth Science and Applications from Space A Midterm Assessment of NASA s Implementation of the Decadal Survey recommends a number of steps to better manage existing programs and to implement future programs that will be recommended by the next decadal survey The report also highlights the urgent need for the Executive Branch to develop and implement an overarching multiagency national strategy for Earth observations from space a key recommendation of the 2007 decadal survey that remains unfulfilled *Science Tutor, Grades 6 - 8* Raham,2008-09-02

**Powering Science** National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Large Strategic NASA Science Missions: Science Value and Role in a Balanced Portfolio, 2018-01-29 NASA s Science Mission Directorate SMD currently operates over five dozen missions with approximately two dozen additional missions in development These missions span the scientific fields associated with SMD s four divisions Astrophysics Earth Science Heliophysics and Planetary Sciences Because a single mission can consist of multiple spacecraft NASA SMD is responsible for nearly 100 operational spacecraft The most high profile of these are the large strategic missions often referred to as flagships Large strategic missions are essential to maintaining the global leadership of the United States in space exploration and in science because only the United States has the budget technology and trained personnel in multiple scientific fields to conduct missions that attract a range of international partners This report examines the role of large strategic missions within a balanced program across NASA SMD space and Earth sciences programs It considers the role and scientific productivity of such missions in advancing science technology and the long term health of the field and provides guidance that NASA can use to help set the priority of larger missions within a properly balanced program containing a range of mission classes

**Bibliography of Reports by the National Academy of Sciences, 1945-1985** ,1986 *Future Biotechnology Research on the International Space Station* National Research Council, Commission on Physical Sciences, Mathematics, and Applications, Space Studies Board, Task Group for the Evaluation of NASA's Biotechnology Facility for the International Space Station, 2000-04-14 Under current NASA plans investigations in the area of biotechnology will be a significant component of the life sciences research to be conducted on the International Space Station ISS They encompass work on cell science and studies of the use of microgravity to grow high quality protein

crystals Both these subdisciplines are advancing rapidly in terrestrial laboratories fueled by federal and industrial research budgets that dwarf those of NASA's life science program Forging strong and fruitful connections between the space investigations and laboratory bench biologists a continual challenge for NASA's life sciences program is thus of great importance to ensuring the excellence of ISS research This report evaluates the plan for NASA's biotechnology facility on the ISS and the scientific context that surrounds it and makes recommendations on how the facility can be made more effective In addition to questions about optimizing the instrumentation the report addresses strategies for enhancing the scientific impact and improving the outreach to mainstream terrestrial biology No major redirection of effort is called for but collectively the specific targeted changes recommended by the task group would have a major effect on the conduct of biotechnology research in space

**Reviews of Data on Research & Development** National Science Foundation (U.S.),1956 *Controlling Cost Growth of NASA Earth and Space Science Missions* National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Committee on Cost Growth in NASA Earth and Space Science Missions,2010-10-21 Cost and schedule growth is a problem experienced by many types of projects in many fields of endeavor Based on prior studies of cost growth in NASA and Department of Defense projects this book identifies specific causes of cost growth associated with NASA Earth and space science missions and provides guidance on how NASA can overcome these specific problems The recommendations in this book focus on changes in NASA policies that would directly reduce or eliminate the cost growth of Earth and space science missions Large cost growth is a concern for Earth and space science missions and it can be a concern for other missions as well If the cost growth is large enough it can create liquidity problems for NASA's Science Mission Directorate that in turn cause cost profile changes and development delays that amplify the overall cost growth for other concurrent and or pending missions Addressing cost growth through the allocation of artificially high reserves is an inefficient use of resources because it unnecessarily diminishes the portfolio of planned flights The most efficient use of resources is to establish realistic budgets and reserves and effective management processes that maximize the likelihood that mission costs will not exceed reserves NASA is already taking action to reduce cost growth additional steps as recommended herein will help improve NASA's mission planning process and achieve the goal of ensuring frequent mission opportunities for NASA Earth and space science
