Overcoming Students' Misconceptions in Science Mageswary Karpudewan, Ahmad Nurulazam Md Zain, A.L. Chandrasegaran, 2017-02-28 This book discusses the importance of identifying and addressing misconceptions for the successful teaching and learning of science across all levels of science education from elementary school to high school. It suggests teaching approaches based on research data to address students' common misconceptions. Detailed descriptions of how these instructional approaches can be incorporated into teaching and learning science are also included. The science education literature extensively documents the findings of studies about students' misconceptions or alternative conceptions about various science concepts. Furthermore, some of the studies involve systematic approaches to not only creating but also implementing instructional programs to reduce the incidence of these misconceptions among high school science students. These studies, however, are largely unavailable to classroom practitioners partly because they are usually found in various science education journals that teachers have no time to refer to or are not readily available to them. In response, this book offers an essential and easily accessible guide.

Complete Science Communication Ryan C Fortenberry, 2018-10-22 Science communication is a rapidly expanding area and a key component of many final year undergraduate and postgraduate courses. Authored by a highly regarded chemist and science communicator, this textbook pulls together all aspects of science communication. *Complete Science Communication* focusses on four major aspects of science communication: writing for non-technical audiences and science journalism; writing for technical audiences and peer-reviewed journal writing; public speaking of science and public relations. It first showcases how writing in a journalistic style is done and provides a guide for colloquially communicating science. Then, the art of writing scientific papers is conjoined to this idea to make technical manuscripts more digestible, readable, and hence citable. These ideas are next taken into the spoken word so that the scientist can engage in telling their science like that natural human art of campfire stories. Finally, all of these communication concepts are wrapped together in a discussion of public relations, providing the scientist with an appreciation for the marketing directors and news disseminators with whom they will work. Written in an accessible way, this textbook will provide science students with an appreciative understanding of communication marketing.

journalism and public relations They can incorporate these aspects into their own practices as scientists allowing them to liaise with practitioners in the communication field
