Big Data and High Performance Computing L. Grandinetti, G.R. Joubert, M. Kunze, 2015-10-20 Big Data has been much in the news in recent years and the advantages conferred by the collection and analysis of large datasets in fields such as marketing, medicine, and finance have led to claims that almost any real world problem could be solved if sufficient data were available. This is of course a very simplistic view and the usefulness of collecting, processing, and storing large datasets must always be seen in terms of the communication, processing, and storage capabilities of the computing platforms available. This book presents papers from the International Research Workshop Advanced High Performance Computing Systems held in Cetraro, Italy, in July 2014. The papers selected for publication here discuss fundamental aspects of the definition of Big Data as well as considerations from practice where complex datasets are collected, processed, and stored. The concepts, problems, methodologies, and solutions presented are of much more general applicability than may be suggested by the particular application areas considered. As a result, the book will be of interest to all those whose work involves the processing of very large data sets, exascale computing, and the emerging fields of data science.

Exemplars of Assessment in Higher Education Jane Marie Souza, Tara A. Rose, 2023-07-03 Co-published with While assessment may feel to constituents like an activity of accountability simply for accreditors, it is most appropriate to approach assessment as an activity of accountability for students. Assessment results that improve institutional effectiveness, heighten student learning, and better align resources serve to make institutions stronger for the benefit of their students, and those results also serve the institution or program well during the holistic evaluation required through accreditation. Actual Consciousness Ted Honderich, 2014-07-10 What is it for you to be conscious There is no agreement whatever in philosophy or science it has remained a hard problem a mystery Is this partly or mainly owed to the existing theories not even having the same subject not answering the same question In *Actual Consciousness* Ted Honderich sets out to supersede dualisms objective physicalisms abstract functionalism externalisms and other positions in the debate He argues that the theory of Actualism right or wrong is unprecedented in nine ways 1 It begins from gathered data and proceeds to an adequate initial clarification of consciousness in the primary ordinary sense This consciousness is summed up as something's being actual 2 Like basic science Actualism proceeds from this metaphorical or figurative beginning to what is wholly literal and explicit constructed answers to the questions of what is actual and what it is

for it to be actual 3 In so doing the theory respects the differences of consciousness within perception consciousness that is thinking in a generic sense and consciousness that is generic wanting 4 What is actual with your perceptual consciousness is a subjective physical world out there very likely a room differently real from the objective physical world that other division of the physical world 5 What it is for the myriad subjective physical worlds to be actual is for them to be subjectively physical which is exhaustively characterized 6 What is actual with cognitive and affective consciousness is affirmed or valued representations The representations being actual which is essential to their nature is their being differently subjectively physical from the subjective physical worlds 7 Actualism naturally enough when you think of it but unlike any other existing general theory of consciousness is thus externalist with perceptual consciousness but internalist with respect to cognitive and affective consciousness 8 It satisfies rigorous criteria got from examination of the failures of the existing theories In particular it explains the role of subjectivity in thinking about consciousness including a special subjectivity that is individuality 9 Philosophers and scientists have regularly said that thinking about consciousness requires just giving up the old stuff and starting again Actualism does this Science is served by this main line philosophy which is concentration on the logic of ordinary intelligence clarity consistency and validity completeness generality

Understanding Priming Effects in Social

Psychology Daniel C. Molden, 2014-09-12. How incidentally activated social representations affect subsequent thoughts and behaviors has long interested social psychologists. Recently, such priming effects have provoked debate and skepticism. Originally a special issue of *Social Cognition*, this book examines the theoretical challenges researchers must overcome to further advance priming studies and considers how these challenges can be met. The volume aims to reduce the confusion surrounding current discussions by more thoroughly considering the many phenomena in social psychology that the term priming encompasses and closely examining the psychological processes that explain when and how different types of priming effects occur.
