Cerebral endothelial and glial cells are more than bricks in the Great Wall of the brain: insights into the way the blood-brain barrier actually works (Celebrating the centenary of Goldman's experiments) Elena

García-Martín,George E. Barreto,José A. G. Agúndez,Rubem C. A. Guedes,Ramon Santos El-Bachá,2015-07-02 When Ehrlich discovered the first evidence of the blood brain barrier in 1885 he probably did not perceive the Great Wall that remained hidden from consciousness inside the central nervous system Ehrlich had observed that acidic vital dyes did not stain the brain if they were injected into the blood stream A century ago 1913 Goldman showed that the injection of trypan blue in the cerebrospinal fluid stained only the brain but not the other organs For almost a century it was thought that the blood brain barrier BBB consisted in a physical barrier resulting from the restricted permeability of the cerebral endothelial cell layer as they are joined by tight junctions However as scientists are always looking for news in what is already discovered in the end of the 20th century we had evidences that cerebral endothelial and glial cells express several drug metabolizing enzymes consisting in a second protection system a metabolic barrier Furthermore the drugs and their metabolites must overcome the activity of several multidrug resistance proteins that function as ATP dependent efflux pumps consisting in the third line of defence the active barrier Therefore the way the BBB actually works should be better explained Several endogenous compounds as well as xenobiotics may be activated by enzymes of the metabolic barrier generating reactive oxygen species that could damage neurons Therefore endothelial and glial cells possess endogenous protecting compounds and enzymes against oxidants consisting in an antioxidant barrier When all these systems fail glial cells mainly microglia secrete cytokines in an attempt to crosstalk with defence cells asking for help which consists in an immune barrier In cerebral regions that are devoid of the physical barrier such as circumventricular organs the metabolic active antioxidant and immune barriers are reinforced It is important to understand how cells involved in the BBB interact with one another and the dynamic mechanisms of their functions This Research Topic published in this e Book considers recent highlights in BBB structure cell and molecular biology biotransformation physiology pathology pharmacology immunology and how these basic knowledges can be applied in drug discovery and clinical researches rewriting what is already written and paving the way that goes to the Great Wall in the Frontiers of the Brain in this new century that is just beginning

Broadway,Claire M. Zedelius,Jonathan W. Schooler,Simon Grondin,2015-07-02 Researchers working in many fields of psychology and neuroscience are interested in the temporal structure of experience as well as the experience of time at scales of a few milliseconds up to a few seconds as well as days months years and beyond This Research Topic supposes that broadly speaking the field of time psychology can be organized by distinguishing between perceptual and conceptual time scales Dealing with conceptual time mental time travel also called mental simulation self projection episodic semantic memory propection foresight allows humans and perhaps other animals to imagine and plan events and experiences in their personal futures based in large part on memories of their personal pasts as well as general knowledge Moreover contents of human language and thought are fundamentally organized by a temporal dimension enmeshed with it so thoroughly that it is usually expressible only through spatial metaphors But what might such notions have to do with experienced durations of events lasting milliseconds up to a few seconds during the so called present moment of perception action cycle time This Research Topic is organized around the general premise that by considering how mental time travel might scale down to time perception and vice versa no less progress and integrative synthesis within and across scientific domains might be facilitated Bipolar configurations of future and past orientations of the self may be repeated in parallel across conceptual and perceptual time scales subsumed by a general Janus like feedforward feedback system for goal pursuit As an example it is notable that the duality of propection and semantic episodic memory operating at conceptual time scales has an analogue in perception action cycle time namely the interplay of anticipatory attention and working memory Authors from all areas of psychology and neuroscience are encouraged to submit articles of any format accepted by the journal Original Research Methods Hypothesis Theory Reviews etc which might speak to questions about time and temporal phenomena at long and or short time scales *Financial Derivatives* Rob Quail,James A. seepage weathering and artificial disturbance rock materials inevitably develop defects fissures cracks pores voids faults etc which greatly reduce the physical and mechanical properties of rock materials With the development of large scale engineering construction and resource exploitation there is an increasing demand for high strength rock masses Thus the development and refinement of mechanics theories pertaining to rock materials with defects are necessary The substratum of these large scale engineering projects predominantly comprises various types of rock mass materials Those typical defects of rock mass materials often manifest at scales beyond the mesoscopic and microscopic scales but below the macroscopic scale making it difficult to discern statistical laws governing their behavior Therefore it is difficult to determine the reasonable statistical scale of volume units when constructing the theoretical system of mechanics At the same time testing the physical and mechanical parameters of rock materials with defects will also facilitate us to have a clear understanding of the reliability of the project These related research and innovations provide crucial insights for stability analysis in engineering construction
