

Physical Science Module 2 Review Paper

Unit 1 Review

- As a wave travels through a medium, it transports energy but does not transport matter in the direction of the wave.
- Transverse waves are waves in a direction perpendicular to the direction of wave travel. Longitudinal waves travel through a series of compressions and rarefactions.
- Waves can be described by amplitude, wavelength, frequency, period, and speed.
- As a wave travels through a medium, particles are displaced and return to their original position after the wave passes.
- Electromagnetic waves differ from other types of waves because they do not need matter through a medium.
- A wavelength is the distance between two consecutive compressions or rarefactions.
- Given the distance between two consecutive compressions or rarefactions, you can calculate the wavelength.
- As the distance between two consecutive compressions or rarefactions is smaller, the frequency is greater.
- As a wave travels through a medium, the particles of the medium are displaced parallel to the direction of wave travel.
- As a wave travels through a medium, the particles of the medium are displaced parallel to the direction of wave travel. This type of wave is a longitudinal wave.
- Waves that travel through a medium are called mechanical waves.

Unit 2 Assignment Questions

Question	Answer
What type of waves can only travel through matter as medium?	Waves that travel through matter as medium are called <u>mechanical waves</u> .
What is period?	Period is the time it takes for one complete cycle of a wave to pass a point.
What is the relationship between amplitude and period?	As the amplitude of a wave increases, the period also increases. This means that waves with larger amplitudes have a longer period.
How does the type of medium affect a wave?	The type of medium affects the speed of a wave. Waves travel faster in solids than in liquids or gases.
Describe the relationship between frequency and wavelength.	Frequency and wavelength are inversely proportional. As the frequency of a wave increases, the wavelength decreases.
