Practice Manual For Ipcc Nov 2013:

Recarbonizing global soils – A technical manual of recommended management practices Food and Agriculture Organization of the United Nations, Intergovernmental Technical Panel on Soils, 2021-09-08 During the last decades soil organic carbon SOC attracted the attention of a much wider array of specialists beyond agriculture and soil science as it was proven to be one of the most crucial components of the earth's climate system which has a great potential to be managed by humans. Soils as a carbon pool are one of the key factors in several Sustainable Development Goals in particular Goal 15 Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification and halt and reverse land degradation and halt biodiversity loss with the SOC stock being explicitly cited in Indicator 15.3.1. This technical manual is the first attempt to gather in a standardized format the existing data on the impacts of the main soil management practices on SOC content in a wide array of environments including the advantages, drawbacks and constraints. This manual presents different sustainable soil management (SSM) practices at different scales and in different contexts supported by case studies that have been shown with quantitative data to have a positive effect on SOC stocks and successful experiences of SOC sequestration in practical field applications. Volume 6 includes 30 case studies dealing with forestry, wetlands and urban soils management.

Practical Auditing Dr. S. V. Shinde,

Agroforestry in rice-production landscapes in Southeast Asia Food and Agriculture Organization of the United Nations, 2018-05-24 This manual is intended to help rural advisory and agricultural extension workers guide farming communities in the establishment of agroforestry practices in rice production landscapes in Southeast Asia. It sets out the steps to be taken to successfully integrate trees in rice fields and associated farms and landscapes and presents practical tools that can be used by extensionists when supporting farmers who are implementing agroforestry practices on their farms. The ultimate aim of this guide is to support farmers in increasing the overall productivity of their farms while increasing resilience to climate change, improving the health of the surrounding environment and enhancing the livelihoods of their communities.

Rewilding in Practice Ian Convery, Steve Carver, Monica T. Engel, Sally Hawkins, Rene Beyers, Yue Cao, 2025-03-03 Rewilding is a long term and large scale process which works to restore degraded ecosystems or social ecological systems to the point that they are resilient and self sustaining and therefore requiring little in terms of conservation management. Rewilding practice focuses on re-establishing ecological processes including trophic levels that were lost mainly due to anthropogenic disturbance. It also aims to affect a paradigm shift in human nature relationships with intentions to better understand the interdependencies between humans and nature so that people can appreciate and accommodate nature in their landscapes and make more informed and sustainable decisions about how we live. In this sense, rewilding has real transformational potential.
