Hickman, M.L Johnson, 2017-07-05 A Dictionary of Biology is an up to date reference work explains several thousand specialized words that allow for empirical approaches to the biological sciences It includes more than bare definitions including information about most of the things named so as to convey their significance in biological discussion M

Abercrombie C J Hickman and M L Johnson in effect interpret this language as it is actually used emphasizing customary usage rather than etymology This comprehensive lexicon includes two thousand entries Many unfamiliar terms especially the rarer ones are defined with the help of other technical terms perhaps equally unfamiliar This trick of dictionary makers could only be avoided by giving a complete account of a large part of biology under each heading Every biological technical term used in a definition is itself defined elsewhere in the dictionary though some semi technical terms words that can be found in any English dictionary are omitted The authors use codes throughout the dictionary to help the reader to interpret the use of a word such as whether it is used in relation to plants and animals only whether the word is an adjective and when a term is defined elsewhere and adds information to the current definition The result is an invaluable guide for the layman the student and the scholar alike It presents clear and authoritative explanations of the terms and will remain useful as a quick and concise source of reference The Rat; a Practical Guide Thomas Arthur Goodwill Wells,1968 **The Frog; a Practical**

De Robertis,2013-10-22 Histophysiology of Synapses and Neurosecretion discusses the relationship between subcellular structure and function in synapses The title discusses how neurosecretion phenomenon takes place in the important areas of central and peripheral nervous system The first part of text deals with the synapse Topics such as the concept of synaptic transmission morphology of synaptic region and ultrastructure of synaptic region are covered in the first part Part I also discusses the MORPHO physiological correlations in certain synapses and neurochemical studies in isolated nerve endings and synaptic vesicles of the CNS The second part of the selection covers neurosecretion Part II tackles the neurohumoral mechanisms and secretion in the hypothalamicneurohypophysial system secretory processes and secretion in adrenergic nerves and endings The book will be of great use to student researchers and practitioners of neurology **Biology**
