Transportation Systems and Service Policy John G. Schoon, 2012-12-06. The many aspects of urban transportation planning and design demand a multi-faceted approach to ensure responsive, economical, and environmentally sensitive facilities that enhance mobility. Yet all too easily the complexity of the process can obscure the major elements. This book aims at assisting the analyst to provide decision makers with a range of solutions by illustrating how service policies regarding quality of service, fares, investment levels, and environmental impacts affect and are affected by each other. This book therefore concentrates on the process of planning and design. It addresses the major elements of urban transportation planning, design, and impact estimation and offers practice in undertaking typical projects. It focuses on the linkages and interaction with public policy regarding user service levels and the resulting design and impacts. The process is illustrated by: 1. outlining the individual transportation analysis and design techniques and their linkages; 2. describing the planning and design process from population changes affecting demand and mobility needs to estimation of air pollution and energy use impacts that are instrumental in shaping public policy and strategic planning; 3. presenting examples of transportation design projects showing how service policy may affect the physical and operational design of multimodal urban transportation systems; 4. enabling the readers to obtain practice in basic applied transportation analysis, design, and impact estimation by defining the key service policy variables of projects for solution; and 5. familiarizing the reader with.

Building a Regime for the Waters of the Euphrates-Tigris River Basin Aysegul Kibaroglu, 2021-10-18. Due to a variety of reasons, water resources on the globe are becoming scarcer. The degree of water scarcity and its political, economic, and social implications are felt more severely in regions like the Middle East. The Euphrates-Tigris river basin is one of the major sources of water but also a source of tension in the region. Unless cooperation is achieved among the riparian countries, namely Turkey, Syria, and Iraq, in the areas of management, allocation, and utilisation of the waters of the Euphrates-Tigris basin, growing scarcity may result not only in conflict but also in further devastation of an extremely vital source. Recently, water has become a subject matter of international law, and formal and informal deliberations in international conferences have produced general principles and norms for using and managing water resources effectively. Hence, this book is an attempt to put together a meaningful set of principles, norms, rules, and decision
