Remote Instrumentation Services On The E Infrastructure Applications And Tools:

Remote Instrumentation Services on the e-Infrastructure Franco Davoli, Norbert Meyer, Roberto Pugliese, Sandro Zappatore, 2010-11-19 The book focuses on all aspects related to the effective exploitation of remote instrumentation and to the building of complex virtual laboratories on top of real devices and infrastructures These include service oriented architecture SOA and related middleware high speed networking in support of Grid applications wireless Grids for acquisition devices and sensor networks Quality Service QoS provisioning for real time control measurement instrumentation and methodology as well as metrology issues in distributed systems

Remote Instrumentation for eScience and Related Aspects Franco Davoli, Marcin Lawenda, Norbert Meyer, Roberto Pugliese, Jan Węglarz, Sandro Zappatore, 2011-12-16 This book will focus on new Remote Instrumentation aspects related to middleware architecture high speed networking wireless Grid for acquisition devices and sensor networks QoS provisioning for real time control measurement instrumentation and methodology Moreover it will provide knowledge about the automation of mechanisms oriented to accompanying processes that are usually performed by a human Another important point of this book is focusing on the future trends concerning Remote Instrumentation systems development and actions related to standardization of remote instrumentation mechanisms

Remote Instrumentation and Virtual Laboratories Franco Davoli, Norbert Meyer, Roberto Pugliese, Sandro Zappatore, 2010-03-10 Accessing remote instrumentation worldwide is one of the goals of e Science The task of enabling the execution of complex experiments that involve the use of distributed scientific instruments must be supported by a number of different architectural domains which inter work in a coordinated fashion to provide the necessary functionality These domains embrace the physical instruments the communication network interconnecting the distributed systems the service oriented abstractions and their middleware The Grid paradigm or more generally the Service Oriented Architecture SOA viewed as a tool for the integration of distributed resources plays a significant role not only to manage computational aspects but increasingly as an aggregator of measurement instrumentation and pervasive large scale data acquisition platforms In this context the functionality of a SOA allows managing maintaining and exploiting heterogeneous instrumentation and acquisition devices in a unified way by providing standardized interfaces and common working environments to their users but the peculiar aspects of dealing with real instruments of widely different categories may add new functional requirements to this scenario On the other hand the growing transport capacity of core and access networks allows data transfer at unprecedented speed but new challenges arise from wireless access wireless sensor networks and the traversal of heterogeneous network domains The book focuses on all aspects related to the effective exploitation of remote instrumentation and to the building complex virtual laboratories on top of real devices and infrastructures These include SOA and related middleware high speed networking in support of Grid applications wireless Grids for acquisition devices and sensor networks Quality of Service QoS provisioning for real time control measurement
