Fundamentals of Digital Logic and Microcomputer Design M. Rafiquzzaman, 2005-07-08 Fundamentals of Digital Logic and Microcomputer Design has long

been hailed for its clear and simple presentation of the principles and basic tools required to design typical digital systems such as microcomputers. In this Fifth Edition the author focuses on computer design at three levels: the device level, the logic level, and the system level. Basic topics are covered such as number systems and Boolean algebra, combinational and sequential logic design, as well as more advanced subjects such as assembly language programming and microprocessor-based system design. Numerous examples are provided throughout the text. Coverage includes Digital circuits at the gate and flip-flop levels, Analysis and design of combinational and sequential circuits, Microcomputer organization, architecture, and programming concepts, Design of computer instruction sets, CPU memory, and I/O System design features associated with popular microprocessors from Intel and Motorola, Future plans in microprocessor development, An instructor's manual available upon request. Additionally, the accompanying CD-ROM contains step-by-step procedures for installing and using Altera Quartus II software, MASM 6.11, 8086 and 68asm, sim68000, provides valuable simulation results via screen shots.

Fundamentals of Digital Logic and Microcomputer Design is an essential reference that will provide you with the fundamental tools you need to design typical digital systems.

Bioastronautics and Electronics and Invited Addresses
Donald P. Legalley, 2014-05-12
Ballistic Missile and Space Technology Volume I
Bioastronautics and Electronics and Invited Addresses focuses on the advancements of processes, methodologies, and technologies involved in bioastronautics and electronics. The selection first underscores the importance of management in the ballistic missile and space vehicle programs, summary of the US achievements in space and life and times of the crash program. The book then examines person-to-person communications in an atmosphere-free environment, genetics, and the reliability of ecological systems and earth viewer for exospheric navigation trainer. Discussions focus on star and sun simulation, mechanization, biological variation, system requirements, and research and development required. The publication takes a look at man protection during landing, impact of aerospace vehicles, human experiments to determine human tolerance to landing impact in capsule systems, and gyro spin axis bearing program at the General Motors Research Laboratories. Design analysis considerations for space vehicle attitude control, electronically steerable antenna for space vehicles, and estimates of accuracy of Atlantic missile instrumentation are also discussed. The selection is a valuable reference for astronauts and researchers interested in the relationship of bioastronautics and electronics.
