Gregory, 2009-12-15 A revised version of this book is now available The polyethylene industry has been in the midst of major restructuring and rationalization This has lead to joint ventures and alliances to combine technologies and exploit opportunities to maximize improvements in process productivity catalyst innovations and enhancements in extrusion technology and converting This comprehensive study of the polyethylene film extrusion process describes this technology in detail In depth descriptions of the manufacturing processes for polyethylene homopolymers and copolymers including metallocenes are reviewed All aspects of machine design with particular emphasis on screws and dies including coextrusion are discussed comprehensively With computer modeling the interactions between equipment and polymer are quantified All aspects of equipment design and polymer features that control melt fracture interfacial instabilities gauge control output and temperature and cooling of blown and cast film processes are presented quantitatively This methodology will highlight solutions in troubleshooting for optimum design and operation and the best available polymer and formulation choices All polyethylene film applications in packaging agriculture lamination and construction consumer industrial and health care are reviewed and discussed in depth

**The Complete Polyethylene Film Extrusion Manual** Bertram Hubert Gregory, 2014-11-24 A practical and detailed evaluation of polyethylene film extrusion processes for a diverse range of products Polyethylene film is pervasive in many aspects of everyday life in applications including consumer and bulk packaging household items construction horticulture medical and hygiene products and many more Established now for many years the technology of polyethylene film extrusion continues to develop as newer applications often demand superior performance and more established uses strive for reduced materials consumption by downgauging Film performance is influenced by the nature of the polymer the manufacturing process and a wide variety of additives as well as the option of creating ever more complex multi layered structures by coextrusion laminating coating and even intentional blocking Applications may demand stretch or shrink behaviour mechanical strength heat sealability and high or low permeability This book has been written for a wide readership of technologists engineers marketers and students engaged in the development and production of polyolefin films for all applications The aim is to assist in optimizing product performance evaluating the most cost effective solutions and providing useful information on the key polymers and films commercially available Key features of screw and die designs and film treatments blending and formulations are evaluated Clear diagrams are provided together with copious data

**Advances in Polymer Coated Textiles** Gueneri Akovali, 2012-07-24 Polymer coated textiles are known as engineered composite materials at macro scale Coating can offer significant improvements to the substrate mainly of the physical like impermeability and fabric abrasion and or of overall chemical properties as well as the appearance by combining advantages of the components Polymer coated systems employ various kinds of textile substrate structures available mostly of technical textiles Since there are a number of possibilities for different types of

polymers and their combinations textile structures as well as their combinations are possible it is widely open to creativities and almost every day some new innovative application is being introduced Polymer coated textile industry being parallel to the developments in the textile research is so dynamic that today applications like reactive coatings with nanoparticles with self cleaning self sterilizing surfaces systems with conductive polymer coatings to provide EM shielding electronic textile systems with body monitoring properties environmental responsive systems etc are already somewhat classical and are considered almost left in the shade of incoming new developments This book is an up to date summary of the subject by considering the passage from conventional to emerging technologies Criteria for selection of the coat and textile are considered and the manufacturing basics of the system are summarized Emerging technologies and applications including smart intelligent and nanostructured applications are completed by testing and quality control methods of these systems The book is written for all that are interested in this interdisciplinary area it certainly will prove to be of great help to textile and polymer technologists to engineers to scientists as well as to students
