Abstract. Object oriented design and development are popular conceptions in today's software development scenario. Object oriented design supports design principal such as inheritance, coupling, cohesion and encapsulation. The proposed research work will deliver a mechanism for reliability estimation of object oriented design in respect of complexity perspective. The four metrics Inherited Class Complexity (IC2), Coupling Complexity Normalization (CCN), Class Cohesion Complexity Metric (C3M), Encapsulated Class Complexity Metric (EC2M) are proposed for each of object oriented design constructs such as inheritance, coupling, cohesion and encapsulation respectively. Complexity and reliability estimation approach is presented in this paper. On the basis of proposed metrics a multiple regression equation has been established for computing the complexity of design hierarchies. Complexity is inversely affects reliability of object oriented designs. Again a multiple regression equation has been established to compute reliability in respect of complexity. Comparative analysis among metric values, reliability and complexity has been done in this paper.

The increasing complexity of software systems makes reliability more difficult to handle. In addition, most software developers have insufficient knowledge of reliability aspect and use immature reliability assurance techniques for preventing reliability defects across the entire software development life cycle. This worsens the problem of reliable software engineering [1]. There are several approaches to makes the system highly reliable. Among several approaches object oriented design is one of the important approach to estimates
