Research

Researchers, governments, industry and communities all have an interest in better understanding and demonstrating the impacts of research. Researchers wish to demonstrate the benefits of their work to their field of research, institutions, stakeholders and society. Funding agencies seek to invest in projects and research areas that are most likely to generate impacts over time. Governments, industry and communities wish to gain value from new knowledge to address real-world challenges.

As a result, governments around the world are increasingly requiring that public investments in research demonstrate tangible impacts. New Zealand is no exception to this international trend. The Government has set a target of raising economy-wide investment in R&D to 2% of GDP by 2027 (from 1.37% in 2018). This increases the imperative to measure the benefits of this investment for society.

MBIE is advancing a stronger research impact agenda in its role as the largest public research funding agency and as steward of the broader research, science and innovation system.

The National Statement of Science Investment (NSSI, 2015) introduced *excellence* and *impact* as key guiding principles for the science system, and the draft Research, Science and Innovation Strategy (2018) proposes *connections* as a third principle.

Measuring and demonstrating impact from research presents a number of substantial challenges. The research system is highly distributed and many factors beyond the research system affect the achievement of impacts. In addition the impact agenda is just one of a number of imperatives faced by researchers and research institutions.

To date, measurement and reporting of research impacts across the system has not been done consistently or systematically. This limits the ability to convincingly demonstrate or understand how to promote impact from public research.

A focus on impact will need to be a system-wide endeavour and will require a common language, data infrastructure, resources and culture change. This document is a foundation for this work by providing a common and shared description of the concept of impact. It will serve as a reference guide for policy development, investment processes, planning and evaluation. The document sets out MBIE's priority work in this area, and its expectations of public research funders, research institutions and researchers with respect to impact. Together with other initiatives, it will enable the whole sector to move forward together and ultimately to understand and improve the impacts generated from public research in New Zealand.

In developing this document, MBIE has considered:

- Submissions received on the *Impact of Science Discussion Paper* in 2017
- International policies and assessment mechanisms for the impact of research
- Literature on science policy, co-innovation and knowledge mobilisation
- Literature on evaluation, results-chains and logic chains
- New Zealand public sector statutes and documents on results-based management and planning.
