The Origins of Evolutionary Innovations Andreas Wagner, 2011-07-14 The history of life is a nearly four billion year old story of transformative change This change ranges from dramatic macroscopic innovations such as the evolution of wings or eyes to a myriad of molecular changes that form the basis of macroscopic innovations We are familiar with many examples of innovations qualitatively new phenotypes that provide a critical benefit but have no systematic understanding of the principles that allow organisms to innovate This book proposes several such principles as the basis of a theory of innovation integrating recent knowledge about complex molecular phenotypes with more traditional Darwinian thinking Central to the book are genotype networks vast sets of connected genotypes that exist in metabolism and regulatory circuitry as well as in protein and RNA molecules The theory can successfully unify innovations that occur at different levels of organization It captures known features of biological innovation including the fact that many innovations occur multiple times independently and that they combine existing parts of a system to new purposes It also argues that environmental change is important to create biological systems that are both complex and robust and shows how such robustness can facilitate innovation Beyond that the theory can reconcile neutralism and selectionism as well as explain the role of phenotypic plasticity gene duplication recombination and cryptic variation in innovation Finally its principles can be applied to technological innovation and thus open to human engineering endeavours the powerful principles that have allowed life s spectacular success World Fishing ,1979 *International Books in Print*, 1988 Archie Rugh,1988 Paperbound Books in Print ,1991 *Applied Science & Technology Index* ,1979 *List of Members* American Institute of Certified Public Accountants,1984
