

The background of the cover is a fine, detailed painting. On the left, a large, vibrant red flower with many petals and a central cluster of stamens is in full bloom. To its right, two hummingbirds are depicted: one is perched on a thin branch, facing left, and the other is in flight, hovering towards the right. The scene is filled with various green leaves and branches, some with small red buds or flowers, creating a lush, naturalistic setting. The overall style is reminiscent of 19th-century naturalist art.

Current Ornithology Richard Johnston, 2013-11-11 The appearance of the first volume of a projected series is the occasion for comment on scope aims and genesis of the work The scope of *Current Ornithology* is all of the biology of birds Ornithology as a whole organism science is concerned with birds at every level of biological organization from the molecular to the community at least from the Jurassic to the present time and over every scholarly discipline in which bird biology is done to say this is merely to expand a dictionary definition of ornithology The aim of the work to be realized over several volumes is to present reviews or position statements concerning the active fields of ornithological research The reviews will be relatively short and often will be done from the viewpoint of a readily identified group or school Such a work could have come into being at any time within the past fifty years but that *Current Ornithology* appears now is a result of events that are only seven to eight years old One important event was the initiation in 1975 1976 of the Workshop on a National Plan for Ornithology under the directorship of James R King and Walter J Bock cosponsored by the American Ornithologists Union and the National Science Foundation Part of the Workshop s interests lay in publications resources and certain kinds of information on publications were obtained by means of a questionnaire

Marra, 2005-05-02 For centuries biologists have tried to understand the underpinnings of avian migration where birds go and why why some migrate and some do not how they adapt to a changing environment and how migratory systems evolve Twenty five years ago the answers to many of these questions were addressed by a collection of migration experts in Keast and Morton's classic work *Migrant Birds in the Neotropics* In 1992 Hagan and Johnston published a follow up book *Ecology and Conservation of Neotropical Migrant Landbirds* In *Birds of Two Worlds* Russell Greenberg and Peter Marra bring together the world's experts on avian migration to discuss its ecology and evolution The contributors move the discussion of migration to a global stage looking at all avian migration systems and delving deeper into the evolutionary foundations of migratory behavior Readers interested in the biology behavior ecology and evolution of birds have waited a decade to see a worthy successor to the earlier classics *Birds of Two Worlds* will complete the trilogy and become indispensable for ornithologists evolutionary biologists serious birders and public and academic libraries
