

UNIT OVERVIEW

STAGE ONE: Identify Desired Results		
Established Goals/Standards	Long-Term Transfer Goal	
	<i>At the end of this unit, students will use what they have learned to independently...</i> The Say it with Symbols unit will focus on making sense of symbolic expression and equations. Scholars will understand that there are different ways of reasoning about a situation that can lead to different but equivalent expressions. They will use mathematical properties of equality, distributive and communicative number properties to rewrite expressions. Using equivalent expressions, they will understand that problems can be thought about in different ways. Scholars will further develop their strategies to solve equations, including problems related to volumes of cylinders, cones and spheres. They will also continue their work using multiple representations, including graphs, tables, and symbolic representations.	
	Meaning	
Established Goals/Standards	Enduring Understandings <i>Students will understand that...</i> Algebra provides ideas and symbols for expressing information about quantitative variables and relationships. Students will solve problems designed to develop their understanding and skill in symbolic expressions and equations. Students will understand (Equivalence) - How to represent patterns and relationships in symbolic form - Determining when different symbolic expression are mathematically equivalent - Writing algebraic expressions in useful equivalent forms - Combining symbolic expressions using algebraic operations to form new expressions - Solving linear equations using symbolic reasoning - Using algebraic reasoning to validate generalizations and conjecture (Functions) - Identifying and representing relationships expressed in problem contexts with linear and non linear functions and use these relationships to solve problems - How to analyze equations to determine the patterns of change in a table and graph that an equation	Essential Questions <i>Students will consider such questions as...</i> How can expressions and equations be rewritten into equivalent expressions? How can equivalent expressions be used to solve problems?

learning phoneme symbol correspondences practice at blending and segmenting phonemes in words and copying writing words phrases and sentences Most so called literacy activities have no effect and some like sight word memorization have a strongly negative effect The National Reading Panel 2000 summarized the research on reading methods after screening out thousands of studies that failed to meet minimum scientific standards In an in depth analysis of this evidence McGuinness shows that the most successful methods children reading a year or more above age norms include all the elements in the prototype Finally she argues because phonics type methods are consistently shown to be superior to whole word methods in studies dating back to the 1960s it makes no sense to continue this line of research The most urgent question for future research is how to get the most effective phonics programs into the classroom

Learning To Read Laurence Rieben, Charles A. Perfetti, 2013-12-16 How does a young child begin to make sense out of squiggles on a page Is learning to read a process of extending already acquired language abilities to print What comprises this extension How children learn to read and especially how children are taught to read are problems of sustained scientific interest and enduring pedagogical controversy This volume presents conceptual and theoretical analyses of learning to read research on the very beginning processes of learning to read as well as research on phonological abilities and on children who have problems learning to read In so doing it reflects the important discovery that learning to read requires mastering the system by which print encodes the language The editors hope that some of the work offered in this text will influence future research questions and will make a difference in the way instructional issues are formulated
