The New Age of Catastrophe Alex Callinicos, 2023-04-05 The world is entering a new age of catastrophe The exceptional is becoming normal The last such crisis between 1914 and 1945 witnessed two world wars the Great Depression and the Holocaust Now humankind faces fresh existential threats the COVID 19 pandemic wildfires floods and other extreme weather events caused by accelerating climate change and the danger of nuclear war in the wake of Russia's invasion of Ukraine These threats argues Alex Callinicos have their common source in a multidimensional crisis of the capitalist system which is hitting the buffers hurling us towards societal collapse It embraces the increasing destruction of nature and the degradation of labour a world economy stagnant since the global financial crisis and escalating inter imperialist conflicts between the United States China and Russia So far the main political beneficiary has been the far right which may capture the White House again But the new age of catastrophe is also an age of revolt Following on from Black Lives Matter the MeToo protests and the revolts in Sudan Sri Lanka and Iran multiple faultlines in the system will provoke still more mass movements that can challenge myriad forms of oppression and open the way to a just and sustainable world

Land use and the Sharm el-Sheikh joint work on implementation of climate action on agriculture and food security Pingault, N., Licona Manzur, C., Meybeck, A., Gitz, V., Baral, H., Bernoux, M., Crumpler, K., Duchelle, A., Drieux, E., Thomas, R.P., 2024-06-07 Land use and land use change including related policies interact with climate and climate change including related policies in multiple ways Land use sectors are among the most affected by climate change They are also a significant source of greenhouse gas GHG emissions According to the Intergovernmental Panel on Climate Change agriculture forestry and other land use are the second source of GHG emissions after fossil fuel use and account globally for about 23 percent of total net anthropogenic GHG emissions However the land use sectors are not only part of the problem but also part of the solution They are key to adaptation The global potential of land based mitigation options is evaluated at about 30 percent of the global mitigation effort required in 2050 to meet the 1.5°C target of the Paris Agreement This publication resulting from a collaboration between FAO and the Center for International Forestry Research lead centre of the CGIAR research programme on Forests Trees and Agroforestry aims to recall those complex interactions and to explore the opportunities to enhance the role of land use under the United Nations Framework Convention on Climate Change to advance climate change mitigation and adaptation

All-Hazards Approach Takako Izumi, Miwa Abe, Kumiko Fujita, Rajib Shaw, 2024-10-12 This book presents case studies of risk management of various hazards and risk management systems at regional national and local levels It also proposes a comprehensive approach to reduce future risks by collaborating with various stakeholders and preparing for the most effective responses toward complicated hazards minimizing social damage The COVID 19 pandemic has increased the concern as well as interest in the diversification of future risks and the complexity of the damage and impact that multiple risks may cause These hazard risks include not only natural hazards but also biological industrial and nuclear hazards along

with other risks such as cyber attacks climate change food security conflict and multiple hazards occurring simultaneously The Sendai Framework for Disaster Risk Reduction adopted in 2015 at the United Nations World Conference on Disaster Risk Reduction accounts for the risks caused by natural or manmade hazards as well as related environmental technological and biological hazards and risks The framework guides the multi hazard management of disaster risk in development at all levels and sectors However in the current disaster management system in most countries different offices are responsible for each different hazard making it extremely difficult to manage those hazard risks comprehensively Having experienced the COVID 19 pandemic it is now time to review the current risk management strategy and system and thereafter discuss how to strengthen and transform our risk perception and manner of risk assessment and identification to tackle future multiple hazards Simultaneously further collaboration among experts from different backgrounds and fields will become indispensable While the discussion of the need for an all hazards approach has taken place for many years there now needs to be discussion of a risk focused framework
