Nonlinear Predictive Control Using Wiener Models Maciej Ławryńczuk,2021-09-21 This book presents

computationally efficient MPC solutions The classical model predictive control MPC approach to control dynamical systems described by the Wiener model uses an inverse static block to cancel the influence of process nonlinearity Unfortunately the model s structure is limited and it gives poor control quality in the case of an imperfect model and disturbances An alternative is to use the computationally demanding MPC scheme with on line nonlinear optimisation repeated at each sampling instant A linear approximation of the Wiener model or the predicted trajectory is found on line As a result quadratic optimisation tasks are obtained Furthermore parameterisation using Laguerre functions is possible to reduce the number of decision variables Simulation results for ten benchmark processes show that the discussed MPC algorithms lead to excellent control quality For a neutralisation reactor and a fuel cell essential advantages of neural Wiener models are demonstrated
