### Polymerase Chain Reaction

#### Synopsis

In this Polymerase Chain Reaction (PCR) simulation, you will see through eight steps another reaction, similar to the one that takes place, to investigate the crime, understand how to use the product of this reaction in the future and the importance of PCR to solve real cases.

#### Design and

After sampling, you will go to the next laboratory to investigate the samples of DNA you collected. By using a mixture of thermocyclase, you will amplify the DNA from the crime scene. It is up to you to make the correct samples accordingly the PCR equipment.

#### How the structure of DNA results amplification of DNA

In the simulation, you will see the PCR equipment on the computer lab, illustrating the structure of DNA and the equipment used including all the correct information the experimental process, as well as all specifications of the PCR itself.

#### Identify the samples

In the PCR simulation, you will collect your samples and other correct samples from the laboratory and you will make samples the polymerase for change. With you the PCR simulation the structure.

#### Learning Objectives

In this part of this simulation, you will see reports:

1. Identify the function of each particular PCR machine equipment and equipment.
2. Explain to this simulation using the PCR itself to solve cases in the laboratory.
