Polymerase Chain Reaction

Synopsis

In this Polymerase Chain Reaction (PCR) simulation, you will see through eight steps another method, known as restriction fragment length polymorphism (RFLP), for identifying DNA using restriction enzymes and short DNA probes. The subject matter explains in the text that the simulation may not be used at this time.

Objectives

After completing, you will go to the next lesson in the curriculum. The objective of this lesson is to identify a restriction enzyme, understand the function of the restriction enzyme, and use the restriction enzyme to identify a DNA sequence.

How the structure of DNA results in restriction enzyme

In the simulation, you will see that the restriction enzyme is a protein that identifies the structure of DNA and the sequence of the restriction site. The restriction enzyme is a protein that identifies the sequence of the DNA and the sequence of the restriction site. The restriction enzyme is a protein that identifies the sequence of the DNA and the sequence of the restriction site.

Identify the restriction

In this PCR simulation, you will select your sample and other samples from the simulation. You will also select the restriction enzyme. The restriction enzyme is a protein that identifies the sequence of the DNA and the sequence of the restriction site.

Learning Objectives

In this PCR simulation, you will see the results:

1. Identify the sequence of the restriction site.
2. Identify the sequence of the restriction site.
