

Fill in the gaps in statements and/or equations.

1. The theory that explains the behaviour of gases on the molecular level is called the kinetic theory, which is based on assumptions related to the ideal gas of non-relativistic particles.
2. Use the kinetic theory to explain why a helium filled balloon expands when it is brought inside a warm room from the cold outdoors.
 According to the kinetic theory, particles have more kinetic energy. Consequently, the pressure is higher in warm rooms than in the cold outdoors, and consequently it is stronger to expand (outward force). Therefore, the balloon (the particles) will expand to the same pressure as the outside air.
3. Define "1 bar" and "1 Pa".
1 bar is defined as 100,000 Pa, which is the pressure at sea level.
4. Gases expand more from cold outdoor under constant volume than from high pressure.
5. Pressure is defined as force per unit area. The earth's atmosphere has weight, which creates pressure.
6. Standard temperature has been established as 273 K or 0 °C. Standard pressure has been established as 101,325 Pa, 1013 hPa, 1013 mbar, 1013 mHg, or 760 mmHg. The standard unit for standard temperature and pressure is 273 K.
7. A barometer is used to measure atmospheric pressure, which is absolute, is used to measure gas pressure.
8. When atmospheric pressure increases, how does the height of the column of mercury change? It increases.
9. At constant pressure, the volume of a sample of gas increases as temperature increases.
10. At constant pressure, the volume of a sample of gas is inversely proportional to a temperature inversely as the temperature decreases.
