Mobile Working Machines Marcus Geimer, 2020-12-31 Mobile Working Machines are defined by three characteristics. These machines have a certain task of doing a working process; they are mobile and they have a significant energy share in their working functions. The machines should be as productive, efficient and of high quality as possible. All these machines in the field of agriculture, forestry, construction, logistics, municipal sector and in other special applications work in different applications. But many technologies placed in the machines are the same, similar or comparable; therefore, different branches can learn from each other. Mobile Working Machines provides a wide and deep view into the technologies used in these machines. Appropriate for new engineers as well as those who wish to increase their knowledge in this field, this book brings together all the latest research and development into one place. **Experimental Hydrostatic Drive Vehicle** Terry A.
