Space and Related Function Spaces Nicola Arcozzi, Richard Rochberg, Eric T. Sawyer, Brett D. Wick, 2019-09-03 The study
of the classical Dirichlet space is one of the central topics on the intersection of the theory of holomorphic functions and
functional analysis It was introduced about 100 years ago and continues to be an area of active current research The theory is
related to such important themes as multipliers reproducing kernels and Besov spaces among others The authors present the
theory of the Dirichlet space and related spaces starting with classical results and including some quite recent achievements
like Dirichlet type spaces of functions in several complex variables and the corona problem The first part of this book is an
introduction to the function theory and operator theory of the classical Dirichlet space a space of holomorphic functions on
the unit disk defined by a smoothness criterion The Dirichlet space is also a Hilbert space with a reproducing kernel and is
the model for the dyadic Dirichlet space a sequence space defined on the dyadic tree These various viewpoints are used to
study a range of topics including the Pick property multipliers Carleson measures boundary values zero sets interpolating
sequences the local Dirichlet integral shift invariant subspaces and Hankel forms Recurring themes include analogies
sometimes weak and sometimes strong with the classical Hardy space and the analogy with the dyadic Dirichlet space The
final chapters of the book focus on Besov spaces of holomorphic functions on the complex unit ball a class of Banach spaces
generalizing the Dirichlet space Additional techniques are developed to work with the nonisotropic complex geometry
including a useful invariant definition of local oscillation and a sophisticated variation on the dyadic Dirichlet space
Descriptions are obtained of multipliers Carleson measures interpolating sequences and multiplier interpolating sequences
estimates are obtained to prove corona theorems **Full Committee Hearings on H.R. 4766, to Authorize Certain**
