Rice, 2024-05-06 Free living amoebae FLA are fascinating unicellular eukaryotes living freely in soil and freshwater habitats and feeding mainly on bacteria Under stressful conditions they can transform from a motile metabolically active and replicative trophozoite to a dormant and resistant cyst Some FLA can be pathogenic to humans such as Acanthamoeba Balamuthia Naegleria and Sappinia causing rare but fatal infection in humans FLA are also known to be carriers of pathogenic microorganisms but few

information is currently available on the natural bacteria of FLA and how various bacteria avoid phagocytosis predation by these specific types of amoebae There is an imperious need to draw more attention to this group of microorganisms and for this we seek submissions that address advancements in the biology and pathogenesis of FLAs *Biology Today* David L.
