Who Wrote the Book of Life? Lily E. Kay, 2000 This is a detailed history of one of the most important and dramatic episodes in modern science recounted from the novel vantage point of the dawn of the information age and its impact on representations of nature heredity and society Drawing on archives published sources and interviews the author situates work on the genetic code 1953-70 within the history of life science the rise of communication technosciences cybernetics information theory and computers the intersection of molecular biology with cryptanalysis and linguistics and the social history of postwar Europe and the United States Kay draws out the historical specificity in the process by which the central biological problem of DNA based protein synthesis came to be metaphorically represented as an information code and a writing technology and consequently as a book of life This molecular writing and reading is part of the cultural production of the Nuclear Age its power amplified by the centuries old theistic resonance of the book of life metaphor Yet as the author points out these are just metaphors analogies not ontologies Necessary and productive as they have been they have their epistemological limitations Deploying analyses of language cryptology and information theory the author persuasively argues that technically speaking the genetic code is not a code DNA is not a language and the genome is not an information system objections voiced by experts as early as the 1950s Thus her historical reconstruction and analyses also serve as a critique of the new genomic biopower Genomic textuality has become a fact of life a metaphor literalized she claims as human genome projects promise new levels of control over life

through the meta level of information control of the word the DNA sequences and its editing and rewriting But the author shows how the humbling limits of these scriptural metaphors also pose a challenge to the textual and material mastery of the genomic book of life

The Future of Nuclear Waste Rosemary Joyce,2020-01-24 How can nations ensure that buried nuclear waste goes undisturbed for thousands of years The United States government tried to solve this problem with the help of experts they identified in communication materials science and futurism From the perspective of a contemporary archaeologist The Future of Nuclear Waste looks at what these experts suggested and what the government endorsed designs for a modern monument an artificial ruin a purpose built archaeological site that would escape future exploration One design selected for development argued that because specific archaeological sites and objects among them Stonehenge Serpent Mound the Rosetta Stone and rock art made long ago have endured and are seen as significant today contemporary engineers could build monuments that would be equally effective in conveying messages that last even longer An alternative proposal which government planners set aside was rooted in the idea that universal archetypes of design arouse similar human emotions in all times and places Both proposals used common sense assuming that human reactions and understandings are relatively predictable Employing an anthropology of common sense Rosemary Joyce explores why people chosen for their expertise relied on generalizations contradicted by the actual history of preservation and interpretation of archaeological sites and the closest analogues to archetype based designs which are the large scale installations produced in the Land Art movement The book reveals the underlying imagination shared by the experts government planners and artists in which the American West is an empty space available for projects like these It counters this with the dissenting voices of indigenous scholars and activists who document the presence on these nuclear landscapes of Native American people The result is an eye opening and unique demonstration of how a deep understanding of the remote past informs critical debates about the present
