Quantum Dot Fouad Sabry, 2022-01-16 What Is Quantum Dot Quantum dots QDs are semiconductor particles a few nanometres in size having optical and electronic properties that differ from larger particles due to quantum mechanics They are a central topic in nanotechnology When the quantum dots are illuminated by UV light an electron in the quantum dot can be excited to a state of higher energy In the case of a semiconducting quantum dot this process corresponds to the transition of an electron from the valence band to the conductance band The excited electron can drop back into the valence band releasing its energy by the emission of light This light emission photoluminescence is illustrated in the figure on the right The color of that light depends on the energy difference between the conductance band and the valence band or transition between discretized energy states when band structure is no longer a good definition in QDs
