Nuclear Medicine Radiation Dosimetry Brian J McParland, 2010-07-03 Complexities of the requirements for accurate radiation dosimetry evaluation in both diagnostic and therapeutic nuclear medicine including PET have grown over the past decade This is due primarily to four factors Growing consideration of accurate patient specific treatment planning for radionuclide therapy as a means of improving the therapeutic benefit development of more realistic anthropomorphic phantoms and their use in estimating radiation transport and dosimetry in patients Design and use of advanced Monte Carlo algorithms in calculating the above mentioned radiation transport and dosimetry which require the user to have a thorough understanding of the theoretical principles used in such algorithms their appropriateness and their limitations increasing regulatory scrutiny of the radiation dose burden borne by nuclear medicine patients in the clinic and in the development of new radiopharmaceuticals thus requiring more accurate and robust dosimetry evaluations An element common to all four factors is the need for precise radiation dosimetry in nuclear medicine which is fundamental to the therapeutic success of a patient undergoing radionuclide therapy and to the safety of the patients undergoing diagnostic nuclear medicine and PET procedures As the complexity of internal radiation dosimetry applied to diagnostic and therapeutic nuclear medicine increases this book will provide the theoretical foundations for enabling the practising nuclear medicine physicist to understand the dosimetry calculations being used and their limitations allowing the research nuclear medicine physicist to critically examine the internal radiation dosimetry algorithms available

Nombuso Dlamini, Angela Stienen, 2022-05-12 This volume documents research illustrating public dissents and interventions to injustice in modern day cities Authors present everyday occurrences of city life and place making still they show how the ordinary city grows from historical dimensions of injustice violence and fear Yet ordinary citizens continue to make the city their own to contribute to the creation of city structures and to contest those practices of spatial demarcation which limit rather than uplift their everyday social livelihood Chapters show how marginalized populations from racial to gendered to the working poor are part of the apparatus that makes the city function However their contributions to city arrangement and endurance are perpetually at the margins and city spaces continue to be designed in ways that ignore and negate the existence of those who protest inequity Novel to the volume are chapters that document and illustrate contestations of city spaces through artistic representation Public spaces like schools art galleries and museums are presented as central to projects of inhabiting remembering and reimagining in the just city Still ordinary city spaces like the public washroom illustrate issues of gender inequity spatial bias and other art based protests City dwellers interested in learning about the making of the city and those interested in the city as a space of possibilities and the good life will benefit

from this volume Scholars of geography space art and social justice will marvel and simultaneously be appalled by the everyday minute yet shocking descriptions of the complexity and unfairly structured city spaces in which they dwell
