

question 1

Comprehensive Shaft Design Problems: For the following Problems, it will be necessary to do the following:

- Determine the magnitude of the torque in the shaft at all points.
- Compute the forces acting on the shaft at all power-transmitting elements.
- Compute the reactions at the bearings.
- Draw the complete free, shear, and bending moment diagrams.

Display the results of the elements on the shafts, unless otherwise noted.

Design the complete shaft, including the specification of the overall geometry and the consideration of stress-concentration factors. The analysis would show the maximum acceptable diameter at each point on the shaft to be safe from the standpoint of strength.

The shaft in Figure P12-2 rotates at 200 rpm. Pulley A receives 10 hp from below. Gear C delivers 8 hp to the mating gear below it. Chain sprocket D delivers 4 hp to a shaft above. Use SAE 1117 cold-drawn steel.

A. Draw a torque diagram of how the torque flows through the shaft. What is the torque at 20" diameter pulley at point A? (+/- 25 Lbm)

FIGURE P12-2 (Problems 2, 12, 13, and 23)

question 2

B. Based on your torque diagram what is the torque on the shaft at gear C? (+/- 25 lbm)

Shaft Design Solved Problems
