

# Using Dichotomous Key to Identify Sharks

**Classification** is a way of separating a large group of closely related organisms into smaller subgroups. The scientific names of organisms are based on the classification systems of living organisms. The identification of an organism is easy with a **classification system**. To identify an organism, scientists often use a **key**. A key is a listing of characteristics, such as **structure** and **behavior**, organized in such a way that an organism can be identified.

## Procedure

1. Use the image below as a guide to the parts of a shark's body that are used in the dichotomous key.

[Image source](#)

2. Read statements 1A and 1B of the key. They describe a shark characteristic that can be used to separate the sharks into **two major groups**. Then study organism #1 in [the image below](#) for the characteristic referred to in [1A](#) and 1B. Follow the directions until the name for Shark 1 is determined.

For example, to key a shark that has a body that is **NOT** kite-shaped when viewed from above and has a pelvic fin and six gill slits, follow the directions of 1B and go directly to statement 2. Follow statement 2B to statements 3. At statement 3A, identify the shark as belonging to Family **Hexanchidae**.

3. Continue using the key, always starting back at Statement 1a and 1b for each shark until all have been identified. Indicate the family name for each shark in Figure 2 on your word processing document. Then complete the questions under 'Conclusion.'

## Conclusion

1. What is a **classification key** and how is it used?
2. List **four different characteristics** that were used in the shark key.
3. Which **main characteristic** could be used to distinguish shark 4 from shark 8?
4. Which **main characteristic** could be used to distinguish shark 4 from shark 7?
