Q5 A particle P is projected with speed $u \text{ m s}^{-1}$ from the top of a smooth inclined plane of length $2d$ metres. After its projection P moves downwards along a line of greatest slope with acceleration 4 m s^{-2} . At the instant 3 s after projection P has moved half way down the plane. P reaches the foot of the plane 5 s after the instant of projection.

- (i) Form two simultaneous equations in u and d , and hence calculate the speed of projection of P and the length of the plane. [6]

$$s = ut + \frac{1}{2}at^2$$

$$d = 3u + \frac{1}{2} \times 4 \times 3^2$$

At $t = 3$

At $t = 5$

$$s = d$$

$$s = 2d$$

$$u = u$$

$$u = u$$

$$v = ?$$

$$v = ?$$

$$a = 4 \text{ m s}^{-2}$$

$$a = 4 \text{ m s}^{-2}$$

$$t = 3 \text{ s}$$

$$t = 5 \text{ s}$$

Landslides and Engineered Slopes. Experience, Theory and Practice Stefano Aversa, Leonardo Cascini, Luciano Picarelli, Claudio Scavia, 2018-04-17 Landslides and Engineered Slopes Experience Theory and Practice

contains the invited lectures and all papers presented at the 12th International Symposium on Landslides Naples Italy 12-19 June 2016. The book aims to emphasize the relationship between landslides and other natural hazards. Hence three of the main sessions focus on Volcanic induced landslides, Earthquake induced landslides and Weather induced landslides respectively, while the fourth main session deals with Human induced landslides. Some papers presented in a special session devoted to Subaerial and submarine landslide processes and hazard and in a Young Session complete the book. *Landslides and Engineered Slopes: Experience, Theory and Practice* underlines the importance of the classic approach of modern science which moves from experience to theory as the basic instrument to study landslides. Experience is the key to understand the natural phenomena, focusing on all the factors that play a major role. Theory is the instrument to manage the data provided by experience following a mathematical approach; this allows not only to clarify the nature and the deep causes of phenomena but mostly to predict future and if required manage similar events. Practical benefits from the results of theory to protect people and man-made works. *Landslides and Engineered Slopes: Experience, Theory and Practice* is useful to scientists and practitioners working in the areas of rock and soil mechanics, geotechnical engineering, engineering geology and geology.

Exascale Scientific Applications Tjerk P. Straatsma, Katerina B. Antypas, Timothy J. Williams, 2017-11-13. From the Foreword: The authors of the chapters in this book are the pioneers who will explore the exascale frontier. The path forward will not be easy. These authors along with their colleagues who will produce these powerful computer systems will with dedication and determination overcome the scalability problem, discover the new algorithms needed to achieve exascale performance for the broad range of applications that they represent and create the new tools needed to support the development of scalable and portable science and engineering applications. Although the focus is on exascale computers, the benefits will permeate all of science and engineering because the technologies developed for the exascale computers of tomorrow will also power the petascale servers and terascale workstations of tomorrow. These affordable computing capabilities will empower scientists and engineers everywhere. Thom H. Dunning Jr., Pacific Northwest National Laboratory and University of Washington, Seattle, Washington, USA. This comprehensive summary of applications targeting Exascale at the three DoE labs is a must read. Rio Yokota, Tokyo Institute of Technology, Tokyo, Japan. Numerical simulation is now a need in many fields of science, technology and industry. The complexity of the simulated systems coupled with the massive use of data makes HPC essential to move towards predictive simulations. Advances in computer architecture have so far permitted scientific advances but at the cost of continually adapting algorithms and applications. The next technological breakthroughs force us to rethink the applications by taking energy consumption into account. These profound modifications require not only anticipation and sharing but also a paradigm shift in application design to ensure the sustainability of developments by guaranteeing a certain independence of the applications to the profound modifications of the architectures. It is the passage from optimal performance to the portability of performance. It is the challenge of this book to demonstrate by example the

approach that one can adopt for the development of applications offering performance portability in spite of the profound changes of the computing architectures Christophe Calvin CEA Fundamental Research Division Saclay France Three editors one from each of the High Performance Computer Centers at Lawrence Berkeley Argonne and Oak Ridge National Laboratories have compiled a very useful set of chapters aimed at describing software developments for the next generation exa scale computers Such a book is needed for scientists and engineers to see where the field is going and how they will be able to exploit such architectures for their own work The book will also benefit students as it provides insights into how to develop software for such computer architectures Overall this book fills an important need in showing how to design and implement algorithms for exa scale architectures which are heterogeneous and have unique memory systems The book discusses issues with developing user codes for these architectures and how to address these issues including actual coding examples Dr David A Dixon Robert Ramsay Chair The University of Alabama Tuscaloosa Alabama USA *Innovations in Renewable Energies Offshore* Carlos Guedes Soares,Shan Wang,2024-11-11 The contribution of renewable energy offshore to the total energy production is increasing as is the interest in this topic *Innovations in Renewable Energies Offshore* includes the papers presented at the 6th International Conference on Renewable Energies Offshore RENEW 2024 19 21 November 2024 Lisbon Portugal and aims to contribute to the knowledge about the developments and experience obtained in concept development design and operation of such devices The contributions cover a wide range of topics including Resource assessment Wind Energy Wave Energy Tidal Energy Photovoltaic Energy Hydrogen Offshore Multiuse Platforms PTO design Economic assessment Materials and structural design Maintenance Vessels *Innovations in Renewable Energies Offshore* will be of interest to academics and professionals involved or interested in applications of renewable energy resources offshore
