Display of just one projection per page in Positioning chapters presents a manageable amount of information in an easily accessible format. Positioning pages for projections show positioning photographs plus radiographic and anatomy labeled images side by side on a single page with written summaries of topics such as clinical indications, technical factors, patient and body part positions, recommended collimation field size, and evaluation criteria. Clinical Indications sections on positioning pages summarize conditions or pathologies that may be demonstrated by structures or tissues in an examination or projection. Evaluation Criteria on positioning pages describe the evaluation critique process that should be completed for each radiographic image. Pediatric, Geriatric, and Bariatric Patient Considerations help you accommodate unique patient needs. **Bioengineering Liver Transplantation** Luc J.W. Van der Laan, Bart Spee, Monique M. A. Versteegen, 2019-11-19 The aim of this Special Issue is to review understand and evaluate new and exciting opportunities from the field on regenerative medicine biomaterials and stem cell research for the bioengineering of human liver grafts that can be applied for transplantation and personalized treatment of end stage liver disease The development of culture conditions for long term expansion of LGR5 intestinal stem cells as crypt villus structures

demonstrated the feasibility of deriving complex organ like structures in vitro from primary adult tissues including the liver. Moreover, human pluripotent stem cells (hPSCs) can be applied to generate functionally matured liver and bile duct epithelial cells. In this Special Issue, we welcome reviews and original papers focussing on hepatic cell sources including adult hepatic stem cells, organoids, fetal and induced pluripotent stem cells, and primary cells, i.e. hepatocytes, cholangiocytes, and endothelial cells, and how these cells can be applied in tissue engineering strategies to generate implantable and personalized liver grafts. Potential topics include but are not limited to the following: liver tissue engineering, liver regeneration, graft repair, liver stem cells, and organoids, bio scaffolds, and 3D printing. We invite you to contribute original research papers as well as comprehensive reviews aligned with these themes to advance and improve the actual state of the art in liver bioengineering and providing new opportunities for the imminent medical problem of organ and tissue shortage for transplantation. *FDA Consumer*, 2007
