Mechanical Interview Question and Answer

What is the difference between shear center flexural center of twist and elastic center?

Ans. The shear center is the centroid of a cross-section. The flexural center is the center of twist, which is the point on a beam that you can add a load without torsion. The elastic center is located at the center of gravity. If the object is homogeneous and symmetrical in both directions of the cross-section then they are all equivalent.

 The applied load reliability.
 The limit of stresses (localized).
 The loss of property and life in case of failures.
 The limit of initial stresses at the time period of manufacture.
 The extent to which the assumptions can be simplified.

Why entropy change for a reversible adiabatic process is zero?
