Applications in Environmental Sciences Alina Bărbulescu, 2016-03-12 Time series analysis and modelling represent a large study field implying the approach from the perspective of the time and frequency with applications in different domains Modelling hydro meteorological time series is difficult due to the characteristics of these series as long range dependence spatial dependence the correlation with other series Continuous spatial data plays an important role in planning risk assessment and decision making in environmental management In this context in this book we present various statistical tests and modelling techniques used for time series analysis as well as applications to hydro meteorological series from Dobrogea a region situated in the south eastern part of Romania less studied till now Part of the results are accompanied by their R code Neural Circuitry of Behavioral Flexibility: Dopamine and Related Systems Gregory B. Bissonette, Matthew R. Roesch, 2016-03-22 Decades of research have identified a role for dopamine neurotransmission in prefrontal cortical function and flexible cognition Abnormal dopamine neurotransmission underlies many cases of cognitive dysfunction New techniques using optogenetics have allowed for ever more precise functional segregation of areas within the prefrontal cortex which underlie separate cognitive functions Learning theory predictions have provided a very useful framework for interpreting the neural activity of dopamine neurons yet even dopamine neurons present a range of responses from salience to prediction error signaling The functions of areas like the Lateral Habenula have been recently described and its role presumed to be substantial is largely unknown Many other neural systems interact with the dopamine system like cortical GABAergic interneurons making it critical to understand those systems and their interactions with dopamine in order to fully appreciate dopamine's role in flexible behavior Advances in human clinical research like exome sequencing are driving experimental hypotheses which will lead to fruitful new research directions but how do or should these clinical findings inform basic research Following new information from these techniques we may begin to develop a fresh understanding of human disease states which will inform novel treatment possibilities However we need an operational framework with which to interpret these new findings Therefore the purpose of this Research Topic is to integrate what we know of dopamine the prefrontal cortex and flexible behavior into a clear framework which will illuminate clear testable directions for future research

Autism Elizabeth B. Torres, Caroline Whyatt, 2017-09-25 Autism The Movement Sensing Perspective is the result of a collaborative effort by parents therapists clinicians and researchers from all disciplines in science including physics engineering and applied mathematics This book poses questions regarding the current conceptualization and approach to the study of autism providing an alternative unifying data driven framework grounded in physiological factors This book reaches beyond subjective descriptions of autistic phenomena and embraces a new era of objective measurements analyses and statistical inferences The authors harness activities from the nervous systems across the brain and body often in tandem and
