5. The air pump is a positive displacement unit¹² which is continuously lubricated and meets the following requirements:
- Maximum output is approximately 100 m³/min (there is no flow from tanks); if air flow exceeds 80 m³/min, an interlocking pump is started automatically; if air flow falls to around 40 m³/min, pressure is relieved.

For example, the following table shows the results of a regression analysis of the relationship between the number of hours worked per week and the number of hours of sleep per night. The results show that for every additional hour worked per week, the number of hours of sleep per night decreases by 0.1 hours. This relationship is statistically significant at the 5% level.

1. For a body centered cubic (bcc) unit cell, the atoms are located at the corners and the center of the cube. The distance between the center of the cube and one of the corners is the distance between the center of the cube and the center of one of the atoms. This distance is equal to the radius of the atom, r .

NOTICE: If the engine or electrical equipment is to be removed, still attach a high-pressure hose, the hose being attached to the engine or electrical equipment, to prevent leakage from entering the pump.

NOTICE: This A.I.B. system is not waterproof. Under normal conditions, you may be able to wipe your screen. To determine if moisture is in the back of the set, replace the screen after the screen and the damp area has returned. If moisture still appears, the back of the set must be removed as follows:
